

Clinical trial results:

A Phase 4 Randomized, Double-blind, Placebo-controlled Study to Evaluate the Efficacy and Safety of Rimegepant in Episodic Migraine Prevention with Multiple Dosing Regimens

Summary

EudraCT number	2021-005239-22
Trial protocol	ES AT FR SE IT PL
Global end of trial date	10 December 2024

Results information

Result version number	v1 (current)
This version publication date	24 December 2025
First version publication date	24 December 2025

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 June 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of every other day (EOD) and daily rimegepant dosing regimens relative to placebo as a preventive treatment for episodic migraine, as measured by the mean reduction from the Observation Phase in the number of migraine days per month over the entire Double-blind Treatment (DBT) Phase.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 March 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 4
Country: Number of subjects enrolled	Canada: 31
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 52
Country: Number of subjects enrolled	Italy: 30
Country: Number of subjects enrolled	Poland: 165
Country: Number of subjects enrolled	Spain: 44
Country: Number of subjects enrolled	Sweden: 15
Country: Number of subjects enrolled	United States: 216
Country: Number of subjects enrolled	United Kingdom: 133
Worldwide total number of subjects	692
EEA total number of subjects	312

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	669
From 65 to 84 years	23
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted to evaluate the efficacy, safety, and tolerability of once every other day (EOD) and daily rimegepant dosing regimens for the prevention of episodic migraine.

Pre-assignment

Screening details:

A total of 1415 participants were enrolled in the study, of which 716 failed screening and 699 participants were randomized. Of the 699 randomized participants, 692 participants received the study intervention.

Period 1

Period 1 title	DBT Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Double blinded study.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	DB Rimegepant/ Placebo/ OL Rimegepant
-----------	---------------------------------------

Arm description:

Participants received rimegepant (RMG) 75 mg, orally disintegrating tablets (ODT), EOD alternating with matching placebo dosed EOD for 12 weeks in the double blind treatment (DBT) phase. Eligible participants received RMG 75 mg ODT once daily (QD) for 12 weeks in the open label extension (OLE) phase. Participants were followed up for 8 weeks after last dose of study drug.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Orodispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of Rimegepant was administered PO.

Investigational medicinal product name	Rimegepant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Orodispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Rimegepant 75 mg was administered orally (PO).

Arm title	DB Rimegepant/OL Rimegepant
-----------	-----------------------------

Arm description:

Participants received RMG 75 mg ODT, once daily for 12 weeks in the DBT phase. Eligible participants continued to receive RMG 75 mg ODT once daily for 12 weeks in the OLE phase. Participants were followed up for 8 weeks after last dose of study drug.

Primary: Mean Change From Observation Phase (OP) in the Number of Migraine Days per Month Over Entire DBT Phase (Weeks 1 to 12)

End point title	Mean Change From Observation Phase (OP) in the Number of Migraine Days per Month Over Entire DBT Phase (Weeks 1 to 12)
End point description: A migraine day: any calendar day in which participant experienced a qualified migraine headache. Qualified migraine headache: migraine with or without aura, lasting for ≥ 30 minutes, and meeting either ≥ 2 of the pain features: unilateral location; pulsating quality; moderate or severe pain intensity; aggravation by or causing avoidance of routine physical activity OR ≥ 1 of associated symptoms: nausea and/or vomiting; photophobia and phonophobia. Number of migraine days per month were prorated to 28 days and derived for a month in on-DBT efficacy analysis period as follows: $28 \times (\text{total number of migraine days through Month 3 [Weeks 1 to 12]} / (\text{total number of e-diary efficacy data days through Month 3 [Weeks 1 to 12]})$. DB treatment efficacy (Migraine) set: participants in full analysis set who were randomized only once and took ≥ 1 dose of DB study drug (rimegepant or placebo) and had ≥ 14 days of eDiary efficacy data (not necessarily consecutive) in both the OP and ≥ 1 month (4-week interval) in DBT Phase.	
End point type	Primary

Secondary: Mean Change From Baseline in the Migraine-Specific Quality-of-Life Questionnaire (MSQoL) Version 2.1 Restrictive Role Function Domain Score at Week 12 of the DBT Phase

End point title	Mean Change From Baseline in the Migraine-Specific Quality-of-Life Questionnaire (MSQoL) Version 2.1 Restrictive Role Function Domain Score at Week 12 of the DBT Phase
End point description:	
MSQoL is a self-administered, 14-item instrument validated in 3 domains:role restriction, prevention, and emotional function. Restrictive role function domain consisted of 7 items that described how migraine limited one's daily social and work-related activities. Participants were required to respond to items using a 6-point scale ranging from 1 to 6, where 1:none of the time, 2: a little bit of time," "3: some of time,4: a good bit of time, 5: most of time, and 6: all of time. Item scores were recoded using (7 -original score). Raw dimension scores for restrictive role function domain were computed as a sum of recoded item scores and rescaled from a 0 to 100 scale such that lower score (0) indicated poor quality of life and higher scores (100) better quality of life. DB treatment efficacy analysis set included participants in the full analysis set who were randomized only once and took >= 1 dose of double-blind study drug. Here "N":number of participants evaluable for this endpoint.

End point description:

An AE was defined as any new untoward medical occurrence or worsening of a pre-existing medical condition in a participant or clinical investigation participant administered an investigational (medicinal) product and that did not necessarily have a causal relationship with this treatment. Hepatic AEs included: alanine aminotransferase and aspartate aminotransferase increased, liver function test abnormal, bilirubin conjugated, hepatic enzyme increased, blood bilirubin unconjugated increased, blood bilirubin and transaminases increased and hepatic function abnormal. Number of participants with any hepatic-related AEs in the OLE phase were reported in this endpoint measure. Open-label rimegepant safety population included participants in the enrolled analysis set who took ≥ 1 dose of open-label rimegepant.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 8 weeks after last dose of study drug (DBT phase: Week 1 to Week 20; OLE phase Week 12 to Week 32)

Adverse event reporting additional description:

Same event may appear as AE and SAE, but what is presented are distinct events. Event may be categorized as serious in 1 and non-SAE in another participant, or 1 participant may have experienced both. DB and OL RMG treatment safety population = participants in the enrolled analysis set who took ≥ 1 dose of DB/OL-RMG study drug used for DBT and OL RMG.

Assessment type	Non-systematic

Reporting groups

Reporting group title	DB Rimegepant/ Placebo
-----------------------	------------------------

Reporting group description:

Participants received RMG 75 mg, ODT, once EOD alternating with matching placebo dosed EOD for 12 weeks in the DBT phase. Participants were followed up for 8 weeks after last dose of study drug.

Reporting group title	DB Rimegepant
-----------------------	---------------

Reporting group description:

Participants received RMG 75 mg ODT, once daily for 12 weeks in the DBT phase. Participants were followed up for 8 weeks after last dose of study drug.

Reporting group title	DB Placebo
-----------------------	------------

Reporting group description:

Participants received matching placebo for RMG 75 mg ODT once daily for 12 weeks, in the DBT phase. Participants were followed up for 8 weeks after last dose of study drug.

Reporting group title	DB RMG EOD/DB PBO EOD/ OL RMG QD
-----------------------	----------------------------------

Reporting group description:

Participants who received RMG 75 mg, ODT alternating with matching placebo in the DBT phase received RMG 75 mg ODT QD for 12 weeks in the OLE phase. Participants were followed up for 8 weeks after last dose of study drug.

Reporting group title	DB RMG QD/ OL RMG QD
-----------------------	----------------------

Reporting group description:

Participants who received RMG 75 mg ODT in the DBT phase continued to receive RMG 75 mg ODT once daily for 12 weeks in the OLE phase. Participants were followed up for 8 weeks after last dose of study drug.

Reporting group title	DB PBO QD/ OL RMG QD
-----------------------	----------------------

Reporting group description:

Participants who received placebo ODT in the DBT phase received RMG 75 mg ODT once daily for 12 weeks in the OLE phase. Participants were followed up for 8 weeks after last dose of study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 January 2022	Amendment 2: The purpose of the amendment was to update the schedule of assessments, inclusion and exclusion criteria.
17 March 2022	Amendment 3: The purpose of the amendment was to update the schedule of assessments, clarified restrictions around prohibited medication use, to clarified HbA1c collection and analysis sets.
01 July 2022	Amendment 4: The purpose of the amendment was to update the exclusion criterion, clarified low dose aspirin use for cardiovascular prophylaxis and clarified the definition of the "Migraine" analysis set.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
