Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002951-PIP02-21
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 December 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	18 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to assess the efficacy of apitegromab (SRK-015) compared with placebo using the Hammersmith Functional Motor Scale Expanded (HFMSE) in subjects 2 through 12 years old.

Protection of trial subjects:

This study was designed and monitored in accordance with Sponsor procedures, which comply with the ethical principles of the International Council for Harmonisation (ICH) on GCP guidance and in accordance with the Declaration of Helsinki (Version 2013). The study was also conducted in accordance with national and local legal requirements and in accordance with United States (US) Investigational New Drug regulations (21 Code of Federal Regulations [CFR] 312.61) and the European Union (EU)'s Commission Directive 2005/28/EC of 8 April 2005.

Background therapy:

Nusinersen or Risdiplam.

Evidence for comparator: -

Actual start date of recruitment	12 February 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	Netherlands: 6
Country: Number of subjects enrolled	Poland: 16
Country: Number of subjects enrolled	Spain: 15
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Germany: 16
Country: Number of subjects enrolled	Italy: 31
Country: Number of subjects enrolled	United States: 71
Worldwide total number of subjects	188
EEA total number of subjects	109

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	148
Adolescents (12-17 years)	33
Adults (18-64 years)	7
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in this multicenter study in Belgium, France, Germany, Italy, Netherland, Spain, Poland, United Kingdom and the United States from 28 March 2022 to 18 December 2024. Subjects with Type 2 and Type 3 spinal muscular atrophy (SMA) were enrolled into either the Main Efficacy Population (MEP) or the Exploratory Subpopulation (EXP).

Pre-assignment

Screening details:

Study included a Screening Period, a Treatment Period, and a Follow-Up Period. A total of 216 subjects were screened of which 188 subjects (156 subjects in the MEP, and 32 subjects in the EXP) were randomized.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

The sponsor, subjects, parents or caregivers, Investigators, and site personnel, with the exception of the designated unblinded personnel (eg, site Pharmacist), were blinded to treatment assignments.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Main Efficacy Population: Placebo
------------------	-----------------------------------

Arm description:

Subjects aged 2-12 years received apitegromab matching placebo, IV infusion, Q4W, over a period of 1-2 hours during the 52-week Treatment Period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Apitegromab matching placebo, IV infusion, Q4W, over a period of 1-2 hours.

Arm title	Main Efficacy Population: Apitegromab 10 mg/kg
------------------	--

Arm description:

Subjects aged 2-12 years received apitegromab 10 mg/kg, IV infusion, Q4W over a period of 1-2 hours during the 52-week Treatment Period.

Arm type	Experimental
Investigational medicinal product name	Apitegromab
Investigational medicinal product code	
Other name	SRK-015
Pharmaceutical forms	Injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Apitegromab 10 mg/kg, IV infusion, Q4W, over a period of 1-2 hours.

Arm title	Main Efficacy Population: Apitegromab 20 mg/kg
------------------	--

Arm description:

Subjects aged 2-12 years received apitegromab 20 mg/kg, IV infusion, Q4W over a period of 1-2 hours

during the 52-week Treatment Period.

Arm type	Experimental
Investigational medicinal product name	Apitegromab
Investigational medicinal product code	
Other name	SRK-015
Pharmaceutical forms	Injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Apitegromab 20 mg/kg, IV infusion, Q4W, over a period of 1-2 hours.

Arm title	Exploratory Subpopulation: Placebo
------------------	------------------------------------

Arm description:

Subjects aged 13-21 years received apitegromab matching placebo, IV infusion, Q4W over a period of 1-2 hours during the 52-week Treatment Period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Apitegromab matching placebo, IV infusion, Q4W, over a period of 1-2 hours.

Arm title	Exploratory Subpopulation: Apitegromab 20 mg/kg
------------------	---

Arm description:

Subjects aged 13-21 years received apitegromab 20 mg/kg, IV infusion, Q4W over a period of 1-2 hours during the 52-week Treatment Period.

Arm type	Experimental
Investigational medicinal product name	Apitegromab
Investigational medicinal product code	
Other name	SRK-015
Pharmaceutical forms	Injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Apitegromab 20 mg/kg, IV infusion, Q4W, over a period of 1-2 hours.

Reporting group description: Subjects aged 2-12 years received apitegromab 20 mg/kg, IV infusion, Q4W over a period of 1-2 hours during the 52-week Treatment Period.	
Reporting group title	Exploratory Subpopulation: Placebo
Reporting group description: Subjects aged 13-21 years received apitegromab matching placebo, IV infusion, Q4W over a period of 1-2 hours during the 52-week Treatment Period.	
Reporting group title	Exploratory Subpopulation: Apitegromab 20 mg/kg
Reporting group description: Subjects aged 13-21 years received apitegromab 20 mg/kg, IV infusion, Q4W over a period of 1-2 hours during the 52-week Treatment Period.	
Subject analysis set title	Main Efficacy Population: Apitegromab 10 mg/kg + 20 mg/kg
Subject analysis set type	Sub-group analysis
Subject analysis set description: All subjects aged 2-12 years who received apitegromab 10 mg/kg or 20 mg/kg, IV infusion, Q4W, over a period of 1-2 hours during the 52-week Treatment Period.	

Primary: Change From Baseline in Hammersmith Functional Motor Scale Expanded (HFMSE) Total Score at Week 52

End point title	Change From Baseline in Hammersmith Functional Motor Scale Expanded (HFMSE) Total Score at Week 52 ^[1]
End point description: The HFMSE assesses the physical abilities of patients with Type 2 and Type 3 SMA. It comprises of 33 items graded on a scale of 0, 1, or 2, where 0 denotes unable, 1 denotes performed with modification or adaptation, and 2 denotes performed without modification or adaptation. The overall score is the sum of the scores for all activities with a maximum achievable score of 66. Higher scores indicate increased motor function. Modified Intention-to-Treat (MITT) Set, defined as all subjects who received at least 1 dose of study drug and had at least 1 postbaseline evaluable HFMSE assessment.	
End point type	Primary
End point timeframe: Baseline, Week 52	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Applicable treatment arms were assessed for analysis.

Secondary: Change From Baseline in Revised Upper Limb Module (RULM) Total Score at Week 52

End point title	Change From Baseline in Revised Upper Limb Module (RULM) Total Score at Week 52 ^[2]
-----------------	--

End point description:

The RULM is an assessment of upper limb function in nonambulatory patients with SMA that was performed for patients who were 30 months of age or older at baseline. The 19 scored items assess functions that relate to everyday life, such as placing hands from lap, pressing a button, and picking up a token. With the exception of 1 activity with a binary score, these items are scored 0, 1, or 2, where 0 denotes unable, 1 denotes able with modification, and 2 denotes able with no modification. The maximum score achievable is 37. MITT Set, defined as all subjects who received at least 1 dose of study drug and had at least 1 postbaseline evaluable HFMSE assessment.

Secondary: Change From Baseline in Number of World Health Organization (WHO) Motor Development Milestones Attained at Week 52

End point title	Change From Baseline in Number of World Health Organization (WHO) Motor Development Milestones Attained at Week 52 ^[4]
-----------------	---

End point description:

The WHO Multicenter Growth Reference Study performance criteria was utilized to assess the WHO motor development milestones of subjects with Type 2 and nonambulatory Type 3 SMA enrolled in Cohort 2 and Cohort 3 relative to baseline. The WHO motor development milestones are a set of 6 distinct gross motor milestones that are considered to be universal and fundamental to acquiring the ability to walk independently. They include 1) sitting without support, 2) hands and knees crawling, 3) standing with assistance, 4) walking with assistance, 5) standing alone, and 6) walking without assistance. Each item is recorded as 1 (unable), 2 (refusal), 3 (Yes) or 9 (did not test). The number of 3s was counted as the final score. The minimum was 0, which means no motor milestones were achieved; the maximum was 6, which means all 6 milestones were achieved. MITT Set, defined as all subjects who received at least 1 dose of study drug and had at least 1 postbaseline evaluable HFMSE assessment.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 August 2022	The primary reasons for amending the SRK-015-003 protocol were to add collection of antidrug antibodies at various visits, align the timing of vital sign and hypersensitivity monitoring, Change the version of the Columbia-Suicide Severity Rating Scale (C SSRS) to the Children's "baseline/screening" and the Children's "since last visit," which are more appropriate for clinical trials, continue blinding of treatment assignment for patients, Investigators, and site personnel until the completion of the extension trial to reduce the chances of introducing bias in measures assessed in the extension trial, clarify that the interim analysis and stopping the trial for early efficacy are optional and to clarify the time allowed between apitegromab doses, the required timing for pharmacokinetic (PK)-matched electrocardiograms (ECGs), eligibility for the extension trial, the end of study visit for patients who enroll in the extension trial, and overdose language/reporting procedures.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
