

**Clinical trial results:**

A Phase 3, Randomized, Observer-Blind Study to Evaluate the Safety, Tolerability, and Immunogenicity of Multiple Production LOTS and Dose Levels of The Vaccine Candidate BNT162b2 Against COVID-19 in Healthy Subjects 12 Through 50 Years of Age and the Safety, Tolerability, and Immunogenicity of BNT162b2 RNA-Based COVID-19 Vaccine Candidates as a Booster Dose in Healthy Subjects 18 Through 50 Years of Age

Summary

EudraCT number	2021-005903-11
Trial protocol	Outside EU/EEA
Global end of trial date	22 July 2021

Results information

Result version number	v1
This version publication date	06 February 2022
First version publication date	06 February 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 January 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1) To demonstrate that the immune responses induced by BNT162b2 are similar across the 3 US lots (Arms 1, 2, and 3) in subjects without evidence of SARS CoV-2 infection during the study. 2) To demonstrate that the immune response induced by the EU lot (Arm 4) of BNT162b2 is similar to the pooled US lots (Arms 1, 2, and 3) in subjects without evidence of SARS-CoV-2 infection during the study. 3) To demonstrate the noninferiority of the immune response to BNT162b2 in subjects receiving 20 mcg compared to subjects receiving the standard 30 mcg dose (prepared from the same manufacturing lot) without evidence of SARS-CoV-2 infection during the study. 4) To evaluate the safety of BNT162b2 when administered on a 2-dose schedule in healthy subjects 12 through 50 years of age.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 February 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 1573
Worldwide total number of subjects	1573
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	445

Adults (18-64 years)	1128
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted in two parts: primary study and booster study.

Pre-assignment

Screening details:

Total number of subjects enrolled in study were 1574, however 1573 subjects received investigational product (1 subject was excluded for not meeting inclusion criteria). 1 subject randomised to US Lot 1(Arm 1) was administered US Lot 1 for Dose 1 and US Lot 3 for Dose 2, therefore, safety data was collected in both reporting group(Arm 1 and Arm 3).

Period 1

Period 1 title	Primary Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	BNT162b2; Arm 1 (US Lot 1)

Arm description:

Subjects were randomised to receive a single dose of 30 microgram (mcg) BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received BNT162b2 30 mcg single dose vaccine at Visit 1 and 2 separated by 21 days.

Arm title	BNT162b2; Arm 2 (US Lot 2)
------------------	----------------------------

Arm description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received BNT162b2 30 mcg single dose vaccine at Visit 1 and 2 separated by 21 days.

Arm title	BNT162b2; Arm 3 (US Lot 3)
------------------	----------------------------

Arm description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Arm type	Experimental

End points

End points reporting groups

Reporting group title	BNT162b2; Arm 1 (US Lot 1)
Reporting group description: Subjects were randomised to receive a single dose of 30 microgram (mcg) BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.	
Reporting group title	BNT162b2; Arm 2 (US Lot 2)
Reporting group description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.	
Reporting group title	BNT162b2; Arm 3 (US Lot 3)
Reporting group description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.	
Reporting group title	BNT162b2; Arm 4 (EU Lot)
Reporting group description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.	
Reporting group title	BNT162b2; Arm 5 (20 mcg)
Reporting group description: Subjects were randomised to receive a single dose of 20 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.	
Reporting group title	BNT162b2 (30 mcg)
Reporting group description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine by intramuscular injection at Visit 4 (3 months after Dose 2 in the primary study). Subjects participated in the study for 1 month with final visit at 1 month after Visit 4.	
Reporting group title	BNT162b2.B.1.351 (30 mcg)
Reporting group description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2.B.1.351 vaccine by intramuscular injection at Visit 4 (3 months after Dose 2 in the primary study). Subjects participated in the study for 1 month with final visit at 1 month after Visit 4.	
Subject analysis set title	Pooled US Lots
Subject analysis set type	Per protocol
Subject analysis set description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine (in Arm 1, 2, and 3) intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.	
Subject analysis set title	BNT162b2; Arm 3 (US Lot 3)
Subject analysis set type	Safety analysis
Subject analysis set description: Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2. 1 subject randomised to US Lot 1 (Arm 1) was administered US Lot 1 for Dose 1 and US Lot 3 for Dose 2, therefore, safety data was collected in both reporting groups (Arm 1 and Arm 3).	

Primary: Geometric Mean Ratios (GMRs) of Full-Length S-Binding IgG Concentrations Between Individual US Lots 1 Month After Dose 2: Primary Study

End point title	Geometric Mean Ratios (GMRs) of Full-Length S-Binding IgG Concentrations Between Individual US Lots 1 Month After Dose 2: Primary Study ^[1]
-----------------	--

End point description:

GMRs were calculated as ratios of Geometric Mean Concentrations (GMCs) of individual US Lots. Evaluable immunogenicity population included all eligible randomised subjects who received 2 doses of the vaccine to which they were randomised with Dose 2 received within the predefined window, had at least 1 valid immunogenicity result from the blood sample collected within an appropriate window at 1 month after the Dose 2, were negative for both SARS-CoV-2 test (RT-PCR and N-binding antibody) during the study and had no other important protocol deviations as determined by the clinician. Here, 'Number of Subjects Analysed' signifies number of subjects evaluable for this endpoint.

End point type	Primary
----------------	---------

End point timeframe:

1 Month after Dose 2 (maximum up to 35 days after Dose 2)

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The endpoint was planned to be analysed in specified arms only.

Primary: Percentage of Subjects With Local Reactions Within 7 Days After any Dose: Primary Study

End point title	Percentage of Subjects With Local Reactions Within 7 Days After any Dose: Primary Study ^[10] ^[11]
-----------------	---

End point description:

Local reactions were collected by the subject using an electronic diary. Local reactions included Redness, Swelling, and Pain at Injection site for "any dose". Redness, and swelling scaled at any severity (>2.0 cm) were reported. Safety population included all randomised subjects who received at least 1 dose of study intervention.

End point type	Primary
----------------	---------

End point timeframe:

Within 7 days after any dose

Notes:

[10] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be reported for this endpoint

[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was planned to be analysed in specified arms only.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs and SAEs (primary study): From Dose 1 to 1 Month after Dose 2 (up to 35 days after Dose 2); AEs and SAEs (booster study): From Dose 3 to 1 Month after Dose 3 (up to 35 days after Dose 3); Local reactions/systemic events: Within 7 days after each dose

Adverse event reporting additional description:

Safety populations: subjects who received at least 1 dose and had safety data available. SAEs and AEs were grouped by system organ class and summarized. AEs included events collected in electronic diary (local and systemic reactions; systematic assessment) and events collected on case report form at each visit (nonsystematic assessment).

Assessment type	Non-systematic

Reporting groups

Reporting group title	BNT162b2; Arm 1 (US Lot 1)
-----------------------	----------------------------

Reporting group description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Reporting group title	BNT162b2; Arm 2 (US Lot 2)
-----------------------	----------------------------

Reporting group description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Reporting group title	BNT162b2; Arm 4 (EU Lot)
-----------------------	--------------------------

Reporting group description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Reporting group title	BNT162b2; Arm 5 (20 mcg)
-----------------------	--------------------------

Reporting group description:

Subjects were randomised to receive a single dose of 20 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2.

Reporting group title	BNT162b2
-----------------------	----------

Reporting group description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine by intramuscular injection at Visit 4 (3 months after Dose 2 in the primary study). Subjects participated in the study for 1 month with final visit at 1 month after Visit 4.

Reporting group title	BNT162b2.B.1.351
-----------------------	------------------

Reporting group description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2.B.1.351 vaccine by intramuscular injection at Visit 4 (3 months after Dose 2 in the primary study). Subjects participated in the study for 1 month with final visit at 1 month after Visit 4.

Reporting group title	BNT162b2; Arm 3 (US Lot)
-----------------------	--------------------------

Reporting group description:

Subjects were randomised to receive a single dose of 30 mcg BNT162b2 vaccine intramuscular injection at each vaccination visit (Visits 1 and 2) separated by 21 days. Subjects participated in the study for 2 months with final visit at 1 month after Visit 2. 1 subject randomised to US Lot 1 (Arm 1) was administered US Lot 1 for Dose 1 and US Lot 3 for Dose 2, therefore, safety data was collected in both reporting groups (Arm 1 and Arm 3).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 May 2021	A booster study was added in which an additional dose of either BNT162b2 or BNT162b2.B.1.351 (beta variant of concern) was given to a subset of 60 subjects 18 through 50 yrs of age, 3 months after Dose 2, for assessment of safety and immunogenicity.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Data for neutralizing titers in the primary study and all immunogenicity data in the booster study will be posted in 3rd Quarter of 2022 or sooner when the data becomes available
--

Notes:
