

Clinical trial results:

A Phase 3, Randomized, Observer-Blind Study to Evaluate the Safety, Tolerability, and Immunogenicity of Multiple Production LOTS and Dose Levels of The Vaccine Candidate BNT162b2 Against COVID-19 in Healthy Participants 12 Through 50 Years of Age and the Safety, Tolerability, and Immunogenicity of BNT162b2 RNA-Based COVID-19 Vaccine Candidates as a Booster Dose in Healthy Participants 18 Through 50 Years of Age

Summary

EudraCT number	2021-005903-11
Trial protocol	Outside EU/EEA
Global end of trial date	22 July 2021

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 November 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1) To demonstrate that the immune responses induced by BNT162b2 are similar across the 3 US lots (Arms 1, 2, and 3) in subjects without evidence of SARS CoV-2 infection during the study. 2) To demonstrate that the immune response induced by the EU lot (Arm 4) of BNT162b2 is similar to the pooled US lots (Arms 1, 2, and 3) in subjects without evidence of SARS-CoV-2 infection during the study. 3) To demonstrate the non-inferiority of the immune response to BNT162b2 in subjects receiving 20 microgram (mcg) compared to subjects receiving the standard 30 mcg dose (prepared from the same manufacturing lot) without evidence of SARS-CoV-2 infection during the study. 4) To evaluate the safety of BNT162b2 when administered on a 2-dose schedule in healthy subjects 12 through 50 years of age.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 February 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 1573
Worldwide total number of subjects	1573
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	445
Adults (18-64 years)	1128
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted in two parts: primary study and booster study.

Pre-assignment

Screening details:

Total number of subjects enrolled in study and assigned to study intervention were 1574, however, only 1573 subjects received study intervention (1 subject was excluded for not meeting inclusion criteria).

Period 1

Period 1 title	Primary Study (2 Months)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	BNT162b2 30 mcg: US Lot 1
------------------	---------------------------

Arm description:

Subjects were randomised in primary study to receive 30 mcg intramuscular dose of BNT162b2 (US Lot 1) vaccine as 2-dose schedule separated by 21 days. Subjects were followed up for safety for up to 28-35 days after second dose of vaccine, for a maximum of 2 months.

Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received BNT162b2 30 mcg single dose vaccine at Visit 1 and 2 separated by 21 days.

Arm title	BNT162b2 30 mcg: US Lot 2
------------------	---------------------------

Arm description:

Subjects were randomised in primary study to receive 30 mcg intramuscular dose of BNT162b2 (US Lot 2) vaccine as 2-dose schedule separated by 21 days. Subjects were followed up for safety for up to 28-35 days after second dose of vaccine, for a maximum of 2 months.

Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received BNT162b2 30 mcg single dose vaccine at Visit 1 and 2 separated by 21 days.

Arm title	BNT162b2 30 mcg: US Lot 3
------------------	---------------------------

Arm description:

Subjects were randomised in primary study to receive 30 mcg intramuscular dose of BNT162b2 (US Lot 3) vaccine as 2-dose schedule separated by 21 days. Subjects were followed up for safety for up to 28-35 days after second dose of vaccine, for a maximum of 2 months.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	BNT162b2

Period 2

Period 2 title	Booster Study (1 Month)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	No
Arm title	BNT162b2 30 mcg: Booster Dose

Arm description:

Subjects who received 2 doses of 30 mcg BNT162b2 vaccine in primary study from US Lot 1 were randomised to booster study to receive a single 30 mcg intramuscular dose of BNT162b2 vaccine at 3 months after second dose in the primary study. Subjects were followed up for safety for up to 28-35 days after vaccination.

Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received BNT162b2 30 mcg single dose vaccine at Visit 4.

Arm title	BNT162b2.B.1.351 30 mcg: Booster Dose
------------------	---------------------------------------

Arm description:

Subjects who received 2 doses of 30 mcg BNT162b2 vaccine in primary study from US Lot 1, 2 or 3 were randomised to booster study to receive a single 30 mcg intramuscular dose of BNT162b2.B.1.351 vaccine at 3 months after second dose in the primary study. Subjects were followed up for safety for up to 28-35 days after vaccination.

Arm type	Experimental
Investigational medicinal product name	BNT162b2.B.1.351
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Subject analysis set description: Subjects were randomised in primary study to receive 30 mcg intramuscular dose of BNT162b2 (US Lot 3) vaccine as 2-dose schedule separated by 21 days. Subjects were followed up for safety for up to 28-35 days after second dose of vaccine, for a maximum of 2 months.	

Primary: Geometric Mean Ratios (GMRs) of Full-Length S-Binding Immunoglobulin G (IgG) Concentrations Between Individual US Lots 1, 2, and 3 at 1 Month After Dose 2: Primary Study

End point title	Geometric Mean Ratios (GMRs) of Full-Length S-Binding Immunoglobulin G (IgG) Concentrations Between Individual US Lots 1, 2, and 3 at 1 Month After Dose 2: Primary Study ^[1]
-----------------	--

End point description:

Geometric mean concentration (GMC) of full-length S-binding IgG level for individual US lots (US lots 1, 2, and 3) was determined and reported in the descriptive section. Assay results below the lower limit of quantitation (LLOQ) were set to 0.5*LLOQ. GMRs were reported in the statistical analysis section and was calculated as ratio of GMCs of individual US Lots BNT162b2 30 mcg: US Lot 1, BNT162b2 30 mcg: US Lot 2 and BNT162b2 30 mcg: US Lot 3. Evaluable immunogenicity population: Subjects who received 2 doses of vaccine in primary study, with Dose 2 received within predefined window, had at least 1 valid immunogenicity result from blood sample collected within an appropriate window at 1 month after Dose 2, were negative for both SARS-CoV-2 test (RT-PCR and N-binding antibody) during study and had no other protocol deviations determined by clinician. Here, "N"= subjects evaluable for this endpoint.

End point type	Primary
----------------	---------

End point timeframe:

1 Month after Dose 2

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Statistical Analysis was not planned for this endpoint

Notes:	
[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.	
Justification: Statistical Analysis was not planned for this endpoint	

End point values	BNT162b2 30 mcg: US Lot 1	BNT162b2 20 mcg: US Lot 1		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	318	324		
Units: Titer				
geometric mean (confidence interval 95%)	906.3 (847.8 to 968.9)	976.6 (914.1 to 1043.4)		

Statistical analyses

Statistical analysis title	30 mcg vs 20 mcg
Statistical analysis description:	
GMRs and corresponding 2-sided 95% CIs were calculated by exponentiating difference in LS means and corresponding CIs based on analysis of logarithmically transformed assay results using a linear regression model with terms of age and vaccine group.	
Comparison groups	BNT162b2 30 mcg: US Lot 1 v BNT162b2 20 mcg: US Lot 1
Number of subjects included in analysis	642
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[8]
Parameter estimate	Geometric Mean Ratio
Point estimate	0.93
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.84
upper limit	1.02

Notes:

[8] - Noninferiority of the 20-µg dose to the corresponding 30-µg dose was said to be achieved if the lower limit of the 2-sided 95% CI for the GMR is >0.67.

Primary: Percentage of Subjects With Local Reactions Within 7 Days After Dose 1: Primary Study

End point title	Percentage of Subjects With Local Reactions Within 7 Days After Dose 1: Primary Study ^[9]
End point description:	
Local reactions were collected by the subject using an electronic diary. Local reactions included redness, swelling, and pain at injection site after Dose 1. Redness, swelling, and pain at injection site after Dose 1 were reported. Safety population included all randomised subjects who received at least 1 dose of the study intervention. Here, "Overall Number of Subjects Analysed"= subjects evaluable for this endpoint.	
End point type	Primary

Primary: Percentage of Subjects With Systemic Events Within 7 Days After Dose 3: Booster Study

End point title	Percentage of Subjects With Systemic Events Within 7 Days After Dose 3: Booster Study ^[18]
-----------------	---

End point description:

Systemic events were reported using an electronic diary. Fever was defined as temperature ≥ 38.0 C and categorised as ≥ 38.0 to 38.4 C; > 38.4 to 38.9 C; > 38.9 to 40.0 C; > 40.0 C. Systemic events including fever, fatigue, headache, chills, new or worsened muscle pain, new or worsened joint pain, vomiting, diarrhea, and use of antipyretic/analgesic medication after Dose 3 were reported. Safety population included all randomised subjects who received dose 3 of the study intervention.

End point type	Primary
End point timeframe:	
Within 7 days after Dose 3	
Notes:

Primary: Percentage of Subjects With Seroresponse to Reference Strain at 1 Month After Dose 2: Booster Study

End point title	Percentage of Subjects With Seroresponse to Reference Strain at 1 Month After Dose 2: Booster Study ^[56]
-----------------	---

End point description:

Seroresponse was defined as greater than equal to (\geq) 4-fold increase from baseline (before Dose 1 in primary study) to the specified time point. If the baseline measurement was below LLOQ, a post vaccination measurement of $\geq 4 \times \text{LLOQ}$ was considered a seroresponse. Exact 2-sided 95% CI was based on the Clopper and Pearson method. Booster evaluable immunogenicity population: Subjects who received 2 doses of vaccine in primary study, Dose 2 – primary study, Dose 3 – booster study within predefined window, had at least 1 valid immunogenicity result from blood sample collected within appropriate window at 1 month after Dose 3, were negative for both SARS-CoV-2 test at Dose 1, 1-month post Dose 2, 3, and had no other protocol deviations determined by clinician. Here, "Overall Number of Subjects Analysed" = subjects evaluable for this endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs and SAEs-For primary study: From Dose 1 to 1 Month after Dose 2 (up to a maximum of 2 months); For booster study: From Dose 3 to 1 Month after Dose 3 (up to a maximum of 35 days); Local reactions/systemic events: Within 7 days after each dose

Adverse event reporting additional description:

Safety population set. AEs included events collected in e-diary (systematic assessment) and events collected on CRF at each visit (non-systematic assessment).1 subject randomised to US Lot 1 was administered US Lot 1 for Dose 1 & US Lot 3 for Dose 2, therefore, subject was included in both reporting groups (US Lot 1&US Lot 3) for non-SAEs.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 May 2021	A booster study was added in which an additional dose of either BNT162b2 or BNT162b2.B.1.351 (beta variant of concern) was given to a subset of 60 subjects 18 through 50 yrs of age, 3 months after Dose 2, for assessment of safety and immunogenicity.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
