

Clinical trial results:

Treatment of patients with Lichen planus with the JAK-Inhibitor Upadacitinib (Rinvoq®) – a mono-centered double-blinded placebo controlled randomized pilot study (investigator-initiated trial)

Summary

EudraCT number	2021-006031-25

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 January 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 December 2024
Global end of trial reached?	Yes
Global end of trial date	17 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of upadacitinib (Rinvoq®) therapy in patients with Lichen planus.

Protection of trial subjects:

The conduct of this study met all legal and regulatory requirements and in accordance with ethical principles of the Declaration of Helsinki.

Background therapy:

Patients with Lichen planus (LP) show a presence of a strong Th1/Th17 signature. Preliminary data revealed an overactivation of the JAK/STAT Pathway in LP, with hyperactivation of various STAT proteins (STAT1, STAT2, STAT3, STAT4, STAT5). These encouraging results enforce the concept that the use of Janus kinase (JAK) inhibitors in LP could help patients for which present treatments are often not sufficient and help physicians by offering a new possible treatment solution for an often recalcitrant and frustrating disorder.

JAKs are intracellular enzymes that transmit signals from cytokines and growth factors involved in a variety of cellular processes such as inflammatory responses, hematopoiesis, and immune surveillance. The JAK enzyme family comprises four members - JAK1, JAK2, JAK3 and TYK2 - which phosphorylate and thereby activate STATs in pairs. This phosphorylation in turn modulates gene expression and cell function. JAK1 is important for inflammatory cytokine signaling pathways, while JAK2 is important for erythrocyte maturation, and JAK3 signals play a role in immune monitoring and lymphocyte function. Upadacitinib is a selective and reversible JAK inhibitor. In human cell-based assays, upadacitinib preferentially inhibits JAK1 or JAK1/3 signaling pathways compared to other cytokine signaling pathways that are mediated via JAK2 pairs.

Evidence for comparator: -

Actual start date of recruitment	10 August 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 14
Worldwide total number of subjects	14
EEA total number of subjects	14

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	13
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 1 study center in Germany between 10/08/2022 and 17/12/2024.

Pre-assignment

Screening details:

Patients with diagnosis of acute or chronic (>3 months) Lichen planus, with Investigator Global Assessment (IGA) score ≥ 3 and with a clinical presentation and histopathology consistent (performed within 6 months prior to screening) and with at least one target lesion of oral lichen planus were screened.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Verum

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	L04AA44
Other name	Rinvoq®
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 15 mg Upadacitinib per day about 12 weeks

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
