

Clinical trial results:

Effect and safety of semaglutide 7.2 mg once-weekly in participants with obesity

Summary

EudraCT number	2022-000790-94
Trial protocol	GR PT NO SK HU BG
Global end of trial date	26 November 2024

Results information

Result version number	v1 (current)
This version publication date	12 December 2025
First version publication date	12 December 2025

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 March 2025
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	26 November 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

-To demonstrate the superiority of semaglutide subcutaneous (s.c.) 7.2 milligrams (mg) once weekly versus placebo as an adjunct to a reduced calorie diet and increased physical activity, with respect to relative change and achieving greater than or equal to (\geq) 5 percentage (%) reduction in body weight after 72 weeks, in adults with obesity.

Protection of trial subjects:

This study was conducted in accordance with the International Council for Harmonization (ICH) Good Clinical Practice (GCP), the Declaration of Helsinki, and Food and Drug Administration (FDA) 21 Code of Federal Regulations (CFR) 312.120. Essential documents will be maintained and archived in accordance with ICH GCP.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	04 January 2023
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 118
Country: Number of subjects enrolled	Canada: 68
Country: Number of subjects enrolled	Germany: 139
Country: Number of subjects enrolled	Greece: 173
Country: Number of subjects enrolled	Hungary: 93
Country: Number of subjects enrolled	Norway: 50
Country: Number of subjects enrolled	Poland: 122
Country: Number of subjects enrolled	Portugal: 34
Country: Number of subjects enrolled	Slovakia: 100
Country: Number of subjects enrolled	United States: 404
Country: Number of subjects enrolled	South Africa: 106
Worldwide total number of subjects	1407
EEA total number of subjects	829

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1309
From 65 to 84 years	98
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The trial was conducted at 90 sites in 11 countries as follows: Bulgaria, Canada, Germany, Greece, Hungary, Norway, Poland, Portugal, Slovakia, South Africa, and the United States.

Pre-assignment

Screening details:

The trial included a treatment period of 72 weeks (20 weeks of dose escalation and 52 weeks of maintenance period) followed by 9-week follow-up period. Subjects were randomized in 5:1:1 ratio in either semaglutide 7.2 mg, semaglutide 2.4 mg or placebo as an adjunct to reduced-calorie diet and increased physical activity.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Semaglutide 7.2 mg

Arm description:

Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 7.2 mg once weekly up to week 72.

Arm type	Experimental
Investigational medicinal product name	Semaglutide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received Semaglutide injection once weekly at the same day of the week. Injections were to be administered in the thigh, abdomen or upper arm at any time of day irrespective of meals.

Arm title	Semaglutide 2.4 mg
------------------	--------------------

Arm description:

Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 2.4 mg once weekly up to week 72.

Arm type	Experimental
Investigational medicinal product name	Semaglutide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received Semaglutide injection once weekly at the same day of the week. Injections were to be administered in the thigh, abdomen or upper arm at any time of day irrespective of meals.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received placebo (matched to Semaglutide) subcutaneously once weekly for up to week 72.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo (matched to Semaglutide) injection once weekly at the same day of the week. Injections were to be administered in the thigh, abdomen or upper arm at any time of day irrespective of meals.

Number of subjects in period 1	Semaglutide 7.2 mg	Semaglutide 2.4 mg	Placebo
Started	1005	201	201
Full analysis set	1005	201	201
Safety analysis set	1004	201	201
Completed	959	190	180
Not completed	46	11	21
Consent withdrawn by subject	18	6	16
Physician decision	4	-	-
Lost to follow-up	24	5	5

Baseline characteristics

Reporting groups

Reporting group title	Semaglutide 7.2 mg
Reporting group description: Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 7.2 mg once weekly up to week 72.	
Reporting group title	Semaglutide 2.4 mg
Reporting group description: Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 2.4 mg once weekly up to week 72.	
Reporting group title	Placebo
Reporting group description: Subjects received placebo (matched to Semaglutide) subcutaneously once weekly for up to week 72.	

Reporting group values	Semaglutide 7.2 mg	Semaglutide 2.4 mg	Placebo
Number of subjects	1005	201	201
Age Categorical Units: Subjects			

Age Continuous Units: years arithmetic mean standard deviation	47 ± 12	46 ± 12	48 ± 12
Gender Categorical Units: Subjects

Male	10		

End points

End points reporting groups

Reporting group title	Semaglutide 7.2 mg
Reporting group description: Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 7.2 mg once weekly up to week 72.	
Reporting group title	Semaglutide 2.4 mg
Reporting group description: Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 2.4 mg once weekly up to week 72.	
Reporting group title	Placebo
Reporting group description: Subjects received placebo (matched to Semaglutide) subcutaneously once weekly for up to week 72.	
Subject analysis set title	Pooled Semaglutide (7.2 mg + 2.4 mg)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of either 7.2 mg or 2.4 mg once weekly up to week 72. Pooled Semaglutide group was used as sub-population for MRI assessment.	

Primary: Semaglutide 7.2 mg versus Placebo: Relative change in body weight

End point title	Semaglutide 7.2 mg versus Placebo: Relative change in body weight ^[1]
End point description: Relative change in body weight from baseline (week 0) to end of treatment (week 72) is presented. Full analysis set included all randomized subjects. Subjects were analysed according to the randomised treatment. Number of subjects analyzed = Subjects with available data for the endpoint. The endpoint was planned to be assessed for semaglutide 7.2 mg and placebo groups.	
End point type	Primary
End point timeframe: From baseline (week 0) to end of treatment (week 72)	
Notes: [1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The endpoint was planned to be assessed for semaglutide 7.2 mg and placebo groups.	

End point values	Semaglutide 7.2 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	950	171		
Units: Percentage (%) of body weight				
arithmetic mean (standard deviation)	-19.5 (± 10.6)	-3.8 (± 7.1)		

Statistical analyses

Statistical analysis title	Statistical analysis 1
Statistical analysis description: Week 72 responses were analysed using an analysis of covariance model with randomised treatment as	

factor and baseline body weight as covariate.

Comparison groups	Semaglutide 7.2 mg v Placebo

Change in lean body mass (liters) from baseline (week 0) to end of treatment (week 72) is presented. MRI analysis set included all subjects in the sub-population of Full analysis set that have had a valid MRI scan performed at baseline. Number of subjects analyzed = Subjects with available data for the endpoint. As defined in SAP section 4.3.2, the reporting groups semaglutide 7.2 mg and semaglutide 2.4 mg were planned to be pooled for analysis of the endpoint. Hence, data is represented in singled pooled semaglutide (7.2 mg + 2.4 mg) arm.	
End point type	Secondary
End point timeframe:	
From baseline (week 0) to end of treatment (week 72)	
Notes:	
[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.	
Justification: The endpoint was planned to be assessed for single pooled semaglutide (7.2 mg + 2.4 mg) and placebo groups.

End point description:

Number of subjects with change in glycaemic categories from baseline (week 0) presented as Normo-glycaemia, pre-diabetes, type 2 diabetes. Full analysis set included all randomized subjects. Subjects were analysed according to the randomised treatment. Number of subjects analyzed = Subjects with available data for the endpoint. The endpoint was planned to be assessed for semaglutide 7.2 mg and placebo groups.

End point type	Secondary
----------------	-----------

End point timeframe:

From baseline (week 0) to end of treatment (week 72)

Notes:

[33] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was planned to be assessed for semaglutide 7.2 mg and placebo groups.

End point values	Semaglutide 7.2 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	951	168		
Units: Subjects				
Normo-glycaemia to Normo-glycaemia	574	75		
Normo-glycaemia to Pre-diabetes	21	20		
Normo-glycaemia to Diabetes	0	2		
Pre-diabetes to Normo-glycaemia	297	26		
Pre-diabetes to Pre-diabetes	59	42		
Pre-diabetes to Diabetes	0	3

Secondary: Number of adverse events (AEs)

End point title	Number of adverse events (AEs)
-----------------	--------------------------------

End point description:

Number of AEs is reported. An AE is any untoward medical occurrence in a clinical study subjects that is temporally associated with the use of investigational medicinal product (IMP), whether or not considered related to the IMP. Safety analysis set included all subjects who were exposed to at least one dose of randomised trial product. Subjects were analysed according to the treatment they actually received.

End point type	Secondary
----------------	-----------

End point timeframe:

From baseline (week 0) to end of study (week 81)

End point values	Semaglutide 7.2 mg	Semaglutide 2.4 mg	Placebo	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	1004	201	201	
Units: Events	6430	1133	743

Secondary: Number of serious adverse events (SAEs)

End point title	Number of serious adverse events (SAEs)
End point description:	
Number of SAEs is reported. A SAE is any untoward medical occurrence that fulfils at least one of the following criteria: results in death, is life threatening, requires inpatient hospitalisation or prolongation of existing hospitalisation, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect or important medical event. Safety analysis set included all subjects who were exposed to at least one dose of randomised trial product. Subjects were analysed according to the treatment they actually received.	
End point type	Secondary

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From baseline (week 0) to end of study (week 81)

Adverse event reporting additional description:

Safety analysis set included all subjects who were exposed to at least one dose of randomised trial product. Adverse events were assessment based on safety analysis set and all cause mortality was assessed for all randomized subjects in this study.

Assessment type	Systematic

Reporting groups

Reporting group title	Semaglutide 7.2 mg
-----------------------	--------------------

Reporting group description:

Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 7.2 mg once weekly up to week 72.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received placebo (matched to Semaglutide) subcutaneously once weekly for up to week 72.

Reporting group title	Semaglutide 2.4 mg
-----------------------	--------------------

Reporting group description:

Subjects received Semaglutide subcutaneously once weekly in a fixed-dose escalation manner, with dose increases every 4 weeks for up to week 20 (0.25 mg, 0.5 mg, 1.0 mg, 1.7 mg, 2.4 mg) followed by maintenance dose of 2.4 mg once weekly up to week 72.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 September 2022	The amendment from version 1.0 of the protocol to version 2.0 was an administrative amendment as version 1.0 of the protocol was an internal version.
04 October 2022	Key changes are listed below: - Editorial changes e.g. spelling errors, punctuation or updates to more exact wording. Discontinuation criteria line added. Crosses corrected for contraceptive counselling, attend visit fasting, anti semaglutide antibodies and administration of trial product. Two confirmatory secondary endpoints added. Number of participants increased to 400 and ran-domisation changed to 5:1:1. Figure 4-1 updated accordingly. Number of participants in the MRI subpopulation increased to 210. New criteria 8 added. New section added. New footnote added to Table 8-1. Hepatic event text deleted. New appendix added. Plan for immunogenicity analyses changed. Text added. Numbers updated.
16 February 2023	Key changes are listed below: - Editorial changes e.g. spelling errors, punctuation or updates to more exact wording. Biochemistry and haematology assessments added at V16. PHQ-9 and C-SSRS added to V8, V10, V14 and V18. Removed from V12. Handout of PK diaries at V22 removed from flowchart. Added that delaying dose escalation is allowed. Calcitonin ≥ 100 ng/L added as a discontinuation criterion. Patient Health Questionnaire-9 (PHQ-9) and Columbia-Suicide Severity Rating Scale (C-SSRS) at V8, V10, V14 and V18 added to text. Removed from V12 from text. Added 'Acute kidney injury'. Added direct bilirubin, amylase, calcitonin and lipase. Criteria for hepatic laboratory outliers added. Added 'Acute kidney injury'. Appendix added. Slovakia requirements added.
10 August 2023	Key changes are listed below: - Editorial changes e.g. spelling errors, punctuation or updates to more exact wording. Tobacco use assessment added at end-of-treatment (V22) as new endpoint. Removal of the potential risk of 'Neoplasms' (malignant and non-malignant) from Table 2-1. The number of randomised participants in the MRI subgroup changed from approximately 210 to 50 participants. Update of the dosage and administration of, and transition to, the new drug-device combination product during the maintenance phase. Adding text in Section 8.1.5 clarifying that data collected for the clinical assessments 'Control of Eating Questionnaire (COEQ)' and 'Three Factor eating questionnaire 18-items (TFEQ-R18V2)' at end-of-study (V23) is explorative and will not be included in the clinical study report.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Secondary endpoint "Change in free fatty acids" was removed from secondary endpoints due to lack of baseline data.

Notes:
