Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 May 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 May 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was to evaluate the efficacy of JNJ-67484703 in subjects with moderate to severe atopic dermatitis (AD).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 February 2023
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 25
Country: Number of subjects enrolled	Poland: 16
Country: Number of subjects enrolled	Canada: 10
Worldwide total number of subjects	51
EEA total number of subjects	41

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	50
From 65 to 84 years	1

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 51 subjects were enrolled, randomised (2:1 ratio) and treated either with JNJ-67484703 or placebo. Out of 51 subjects, 30 subjects completed the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A: Placebo

Arm description:

Subjects received a single dose of placebo subcutaneous (SC) injection at Week 0 (Day 1), a loading dose at Week 1, followed by once every 2 weeks (Q2W) from Week 2 until Week 10. Subjects were then follow-up for safety up to 26 weeks after the administration of the last dose of study drug at Week 10.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo SC injection at Week 0 (Day 1), a loading dose at Week 1, followed by once Q2W from Week 2 until Week 10.

Arm title	Arm B: JNJ-67484703
------------------	---------------------

Arm description:

Subjects received a single dose of JNJ-67484703 3 milligrams per kilogram (mg/kg) SC injection at Week 0 (Day 1), a loading dose at Week 1, followed by once Q2W from Week 2 until Week 10. Subjects were then follow-up for safety up to 26 weeks after the administration of the last dose of study drug at Week 10.

Arm type	Experimental
Investigational medicinal product name	JNJ-67484703
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received JNJ-67484703 3 mg/kg SC injection at Week 0 (Day 1), a loading dose at Week 1, followed by once Q2W from Week 2 until Week 10.

Number of subjects in period 1	Arm A: Placebo	Arm B: JNJ-67484703
Started	17	34
Completed	9	21
Not completed	8	13
Consent withdrawn by subject	8	10
COVID-19 related	-	3

Primary: Percentage of Subjects Who Achieved Eczema Area and Severity Index (EASI)-75 at Week 12

End point title	Percentage of Subjects Who Achieved Eczema Area and Severity Index (EASI)-75 at Week 12
End point description: Percentage of subjects who achieved EASI-75 at Week 12 were reported. EASI-75 response was defined as at least 75 percent (%) improvement from baseline in EASI total score. The EASI score was used to measure the severity and extent of atopic dermatitis (AD) and measures erythema, infiltration/papulation, excoriation and lichenification on 4 anatomic regions of the body: head or neck, trunk, upper and lower limbs. The total EASI score ranged from 0 (minimum) to 72 (maximum) points, with the higher scores indicated the worse severity of AD. Full analysis set (FAS) included all randomised subjects who had received at least 1 dose of study intervention and provided both baseline and at least 1 postbaseline data.	
End point type	Primary

Secondary: Percentage of Subjects With Improvement (Reduction From Baseline) in Eczema Related Itch Numeric Rating Scale (NRS) Score of ≥ 4 at Week 12 Among Subjects With a Baseline Itch Value ≥ 4

End point title	Percentage of Subjects With Improvement (Reduction From Baseline) in Eczema Related Itch Numeric Rating Scale (NRS) Score of ≥ 4 at Week 12 Among Subjects With a Baseline Itch Value ≥ 4
-----------------	---

End point description:

Percentage of subjects with improvement (reduction from baseline) in eczema-related itch NRS score of ≥ 4 at Week 12 among subjects with a baseline itch value ≥ 4 was reported. The eczema skin pain and Itch NRS is a 3-item patient-reported outcome that subjects used to rate the severity of their eczema-related skin pain and eczema related itch daily. Subjects were asked the following questions: please rate the severity of eczema-related itch at its worst in the past 24 hours. Each item was on a 0 to 10 NRS ranging from 0 "none" to 10 "worst possible". Higher score indicated more severity. FAS included all randomised subjects who had received at least 1 dose of study intervention and provided both baseline and at least 1 postbaseline data.

Secondary: Percentage of Subjects Who Achieved Validated Investigator Global Assessment for Atopic Dermatitis (vIGA-AD) of 0 or 1 and a Reduction From Baseline of ≥ 2 Points at Week 12

End point title	Percentage of Subjects Who Achieved Validated Investigator Global Assessment for Atopic Dermatitis (vIGA-AD) of 0 or 1 and a Reduction From Baseline of ≥ 2 Points at Week 12
-----------------	--

End point description:

Percentage of subjects who achieved vIGA-AD of 0 or 1 and a reduction from baseline of ≥ 2 points at Week 12 were reported. It was an assessment instrument used in clinical studies to rate the severity of AD, based on a 5-point scale ranged from 0 to 4, where 0=Clear: No inflammatory signs of AD; 1=almost clear: Barely perceptible erythema, induration/papulation and/or lichenification. No oozing or crusting; 2=mild: Slight but definite erythema, induration/papulation and/or minimal lichenification. No oozing or crusting; 3=moderate: Clearly perceptible erythema, induration/ papulation and/or lichenification, oozing or crusting may present, 4=severe: Marked erythema, induration/papulation and/or lichenification; Oozing or crusting may be present. Higher score indicated more severity of AD. FAS included all randomised subjects who had received at least 1 dose of study intervention and provide both baseline and at least 1 postbaseline data.

Secondary: Percentage of Subjects With Treatment-emergent Serious Adverse Events (TESAEs)

End point title	Percentage of Subjects With Treatment-emergent Serious Adverse Events (TESAEs)
-----------------	--

End point description:

An AE was any untoward medical occurrence in a clinical study subject administered a pharmaceutical (investigational or non-investigational) product. An AE does not necessarily have a causal relationship with the intervention. Serious adverse events (SAE) is any AE that results in: death, persistent or significant disability/incapacity, requires inpatient hospitalisation or prolongation of existing hospitalisation, is life-threatening experience, is a congenital anomaly/birth defect and may jeopardize subject and/or may require medical or surgical intervention to prevent one of the outcomes listed above. TESAE were SAEs with onset after or on the date of the first dose of the study intervention or that were a consequence of a pre-existing condition that had worsened since baseline. The safety analysis set included all randomised subjects who had received at least 1 dose of study intervention.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Death: From screening (Week-5) to Week 36 (26 weeks after last dose at Week 10); SAE and Non-serious AEs: From Day 1 up to Week 36 (26 weeks after last dose at Week 10)

Adverse event reporting additional description:

The safety analysis set included all randomised subjects who had received at least 1 dose of study intervention.
