

## Clinical trial results:

**A multicenter, open-label, single-arm, multiple-dose study to evaluate the safety, pharmacokinetics, and efficacy of ceftobiprole medocaryl in term and pre-term neonates and infants up to 3 months of age with late-onset sepsis**

### Summary

EudraCT number	2022-001837-35
Trial protocol	LT LV SK PL Outside EU/EEA EE BG DE
Global end of trial date	18 December 2024

### Results information

Result version number	v1 (current)
This version publication date	02 July 2025
First version publication date	02 July 2025

### Trial information

#### Trial identification

Sponsor protocol code	BPR-PIP-003
-----------------------	-------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05856227
WHO universal trial number (UTN)	-
Other trial identifiers	IND Number: 64.407

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000205-PIP02-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 December 2024
Global end of trial reached?	Yes
Global end of trial date	18 December 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To characterise the safety profile of ceftobiprole in term and pre-term neonates and infants up to 3 months of age with LOS.

Protection of trial subjects:

The study was conducted according to the ethical principles that have their origins in the World Medical Association Declaration of Helsinki, the International Council for Harmonisation (ICH) E6 Good Clinical Practice (GCP), and applicable national and local laws and regulations for the conduct of clinical research and the protection of personal data. If conflicts between local laws and regulations arose, more stringent requirements were adopted.

Background therapy:

The investigational medicinal product, ceftobiprole may have been combined with locally-provided ampicillin and/or an aminoglycoside based on the Investigator's judgment.

Evidence for comparator:

Not applicable

Actual start date of recruitment	06 August 2023
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Estonia: 2
Country: Number of subjects enrolled	Lithuania: 1
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	9
EEA total number of subjects	7

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	6
Newborns (0-27 days)	2

Infants and toddlers (28 days-23 months)	1
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Recruitment began in August 2023. The study included pediatric patients from Europe and the USA.

### Pre-assignment

Screening details:

A total of 11 patients were screened for enrollment in this study, two of whom failed the screening process. Nine patients (six pre-term neonates and three term neonates) were enrolled and assigned to the study treatment.

### Period 1

Period 1 title	Overall Trial (ITT/Safety population) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Pre-term Neonates
------------------	-------------------

Arm description:

Pediatric patients (gestational age  $\geq 24$  to 36 weeks), with post-natal age ranging from  $\geq 3$  days to  $\leq 3$  months.

Patients were treated with ceftobiprole 7.5 mg/kg or 10 mg/kg (bodyweight  $< 4$  kg) infused over 2 hours and administered every 12 hours.

Ceftobiprole may have been combined with locally-provided ampicillin and/or an aminoglycoside based on the Investigator's judgment.

Arm type	Experimental
Investigational medicinal product name	Ceftobiprole medocaril
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Study treatment consisted of IV ceftobiprole medocaril for 3 – 10 days, which could be extended to 14 days if considered clinically necessary by the Investigator. Ceftobiprole was administered as a 2-hour IV infusion, with the dose adjusted according to gestational and post-natal ages. To limit infusion volume for the pre-term and term neonates, the ceftobiprole medocaril infusion was administered at a concentration of 4 mg/mL.

<b>Arm title</b>	Term Neonates
------------------	---------------

Arm description:

Pediatric patients (gestational age  $\geq 37$  weeks), with post-natal age ranging from  $\geq 3$  days to  $\leq 3$  months.

Patients were treated with ceftobiprole 10 mg/kg (bodyweight  $< 4$  kg) or 15mg/kg (bodyweight  $\geq 4$  kg) infused over 2 hours and administered every 12 hours.

Ceftobiprole may have been combined with locally-provided ampicillin and/or an aminoglycoside based on the Investigator's judgment

Arm type	Experimental
Investigational medicinal product name	Ceftobiprole medocaril
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for injection/infusion
Routes of administration	Intravenous use

---

**Dosage and administration details:**

Study treatment consisted of IV ceftobiprole medocartil for 3 – 10 days, which could be extended to 14 days if considered clinically necessary by the Investigator. Ceftobiprole was administered as a 2-hour IV infusion, with the dose adjusted according to gestational and post-natal ages. To limit infusion volume for the pre-term and term neonates, the ceftobiprole medocartil infusion was administered at a concentration of 4 mg/mL.

**More information**

**Substantial protocol amendments (globally)**

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 July 2024	The number of term and pre-term neonates was reduced from at least 15 to at least 8 patients, comprising at least two term neonates, and at least six pre-term neonates less than < 37 weeks gestational age.

Notes:

---

**Interruptions (globally)**

Were there any global interruptions to the trial? No

**Limitations and caveats**

None reported
