

Clinical trial results:

An Interventional, Randomized, Active-Controlled, Phase 1/2/3 Study to Investigate the Safety, Tolerability, and Immunogenicity of BNT162b RNA-Based Vaccine Candidates in COVID-19 Vaccine-Experienced Healthy Individuals

Summary

EudraCT number	2022-002008-19
Trial protocol	Outside EU/EEA
Global end of trial date	26 March 2024

Results information

Result version number	v1 (current)
This version publication date	12 October 2024
First version publication date	12 October 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002861-PIP02-20
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 April 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 March 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate safety, tolerability, and immunogenicity of BNT162b RNA-based vaccine candidates in COVID-19 vaccine-experienced healthy individuals. These candidates included:

1. Cohort 2 and Cohort 3: Omicron BA.4/BA.5 variant-adapted BNT162b2.
 - BNT162b2 Bivalent (WT/OMI BA.4/BA.5) in participants 12 years and older. Participants 18 and older received either 30 mcg or 60 mcg dose. Some immunogenicity analyses compared to historic study of BNT162b2 30 mcg, or BNT162b2 Bivalent (WT/OMI BA.1) 30 mcg or 60 mcg.
2. Cohort 1 and Cohort 4: BNT162b5, BNT162b6, BNT162b7, containing modified versions of mRNA segments of the spike protein in adults 18 through 55 years of age.
 - Cohort 1: BNT162b5 Bivalent (WT/OMI BA.2) with BNT162b2 Bivalent (WT/OMI BA.1) as a comparison.
 - Cohort 4: BNT162b5 Bivalent (WT/OMI BA.4/BA.5), BNT162b6 Bivalent (WT/OMI BA.4/BA.5), BNT162b7 Bivalent (WT/OMI BA.4/BA.5), BNT162b7 Monovalent (OMI BA.4/BA.5) with BNT162b2 Bivalent (WT/OMI BA.4/BA.5) as a comparison.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 July 2022
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 1451
Worldwide total number of subjects	1451
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	107
Adults (18-64 years)	1144
From 65 to 84 years	197
85 years and over	3

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Where appropriate, and as per planned analyses, data is summarised and combined for Cohort 2 (C2) and Cohort 3 (C3) 30 micrograms (mcg) groups (G) per age category to provide sufficient power for the immunogenicity hypotheses for each of the age groups.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

Cohort 3 and Cohort 2 (participants 12 through 17 years of age) were open label.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: 18-55 Years (BNT162b5 Bivalent [WT/OMI BA.2] 30 mcg)

Arm description:

Participants aged 18-55 years received BNT162b5 Bivalent (wild type [WT]/omicron [OMI] BA.2) 30 mcg intramuscularly at Visit 1 (Day 1).

Arm type	Experimental
Investigational medicinal product name	BNT162b5 Bivalent (WT/OMI BA.2)
Investigational medicinal product code	PF-07302048
Other name	BNT162b5 RNA-LNP vaccine
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

BNT162b5 Bivalent (WT/OMI BA.2) 30 mcg intramuscularly at Visit 1.

Arm title	Cohort 1: 18-55 Years (BNT162b2 Bivalent [WT/OMI BA.1] 30 mcg)
------------------	--

Arm description:

Participants aged 18-55 years received BNT162b2 Bivalent (WT/OMI BA.1) 30 mcg intramuscularly at Visit 1 (Day 1).

Arm type	Experimental
Investigational medicinal product name	BNT162b2 Bivalent (WT/OMI BA.1)
Investigational medicinal product code	PF-07302048
Other name	BNT162b2 RNA-LNP vaccine
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

BNT162b2 Bivalent (WT/OMI BA.1) 30 mcg intramuscularly at Visit 1.

Arm title	C2 G1:12-17 Years (BNT162b2 Bivalent [WT/OMI BA.4/BA.5] 30mcg)
------------------	--

Arm description:

Participants aged 12-17 years received BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 30 mcg intramuscularly at Visit 1 (Day 1).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	BNT162b2 Bivalent (WT/OMI BA.4/BA.5)
Investigational medicinal product code	PF-07302048
Other name	BNT162b2 RNA-LNP vaccine
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 30 mcg intramuscularly at Visit 1.

Arm title	C2G2+C3G1:18-55Years(BNT162b2 Bivalent[WT/OMI BA.4/BA.5]30mcg)
------------------	--

Arm description:

Participants aged 18-55 years received BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 30 mcg intramuscularly at Visit 1 (Day 1).

Arm type	Experimental
Investigational medicinal product name	BNT162b2 Bivalent (WT/OMI BA.4/BA.5)
Investigational medicinal product code	PF-07302048
Other name	BNT162b2 RNA-LNP vaccine
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 30 mcg intramuscularly at Visit 1.

Arm title	C2G3: 18-55 Years (BNT162b2 Bivalent [WT/OMI BA.4/BA.5] 60mcg)
------------------	--

Arm description:

Participants aged 18-55 years received BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 60 mcg intramuscularly at Visit 1 (Day 1).

Arm type	Experimental
Investigational medicinal product name	BNT162b2 Bivalent (WT/OMI BA.4/BA.5)
Investigational medicinal product code	PF-07302048
Other name	BNT162b2 RNA-LNP vaccine
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 60 mcg intramuscularly at Visit 1.

Arm title	C2G4+C3G2:>55 Years(BNT162b2 Bivalent [WT/OMI BA.4/BA.5]30mcg)
------------------	--

Arm description:

Participants aged more than (>) 55 years received BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 30 mcg intramuscularly at Visit 1 (Day 1).

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

BNT162b2 experienced participants >55 years of age in study C4591031 [NCT04955626] received one dose (30 mcg) of BNT162b2 intramuscularly. As planned this group served as immunogenicity control arm and participants are not included in enrollment number of current C4591044 [NCT05472038] study.

Primary: Cohort 1: Percentage of Participants Reporting Local Reactions Within 7 Days After Study Vaccination

End point title	Cohort 1: Percentage of Participants Reporting Local Reactions Within 7 Days After Study Vaccination ^{[1][2]}
-----------------	--

End point description:

Local reactions recorded by participants in electronic diary (e-diary). Local reactions: redness, swelling, pain at injection site. Redness, swelling graded mild: > 2.0-5.0 cm, moderate: >5.0-10.0 cm, severe: >10.0 cm, grade 4: necrosis/exfoliative dermatitis (redness), necrosis (swelling). Pain at injection site graded mild: did not interfere with daily activity, moderate: interfered with daily activity, severe: prevented daily activity, grade 4: emergency room (ER) visit/hospitalisation. Grade 4 reactions (potentially life threatening) classified by investigator/medically qualified person. Any events recorded on the adverse event (AE) case report form (CRF) that are considered local reactions within 7 days after vaccination were consolidated with e-diary data and included in the reactogenicity report. Safety population: all participants receiving study intervention and obtaining informed consent.

End point type	Primary
----------------	---------

End point timeframe:

From Day 1 to Day 7 after study vaccination

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive data was planned to be analysed for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this analysis was planned to be analysed in Cohort 1 reporting groups only.

End point values	Cohort 1: 18-55 Years (BNT162b5 Bivalent [WT/OMI BA.2] 30 mcg)	Cohort 1: 18-55 Years (BNT162b2 Bivalent [WT/OMI BA.1] 30 mcg)

Primary: Cohort 1: Geometric Mean Titer (GMT) of SARS-CoV-2 Omicron Strain (BA.1

and BA.2) and Reference Strain Neutralising Titers (NTs) at Baseline- Participants Without Evidence of Infection

End point title	Cohort 1: Geometric Mean Titer (GMT) of SARS-CoV-2 Omicron Strain (BA.1 and BA.2) and Reference Strain Neutralising Titers (NTs) at Baseline- Participants Without Evidence of Infection ^[5] ^[6]
-----------------	--

End point description:

GMTs and the corresponding 2-sided confidence intervals (CIs) were calculated by exponentiating the mean logarithm of the titers and the corresponding CIs (based on student's t distribution). Evaluable immunogenicity population (EIP) included all eligible randomised/assigned participants who received the study intervention to which they were randomised/assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28-42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician. Analysis was performed in participants without evidence of infection up to 1 month post study vaccination. Here, "n" signifies participants evaluable for specified rows.

End point type	Primary
End point timeframe:	
At baseline (before study vaccination)	

Notes:

End point description:

GMTs and the corresponding 2-sided CIs were calculated by exponentiating the mean logarithm of the titers and the corresponding CIs (based on student's t distribution). Evaluable immunogenicity population included all eligible randomised/assigned participants who received the study intervention to which they were randomised/assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28-42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician. Analysis was performed in participants without evidence of infection up to 1 month post study vaccination. Here, "n" signifies participants evaluable for specified rows.

End point type	Primary
----------------	---------

End point timeframe:

1 month after the study vaccination

Notes:

[13] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive data was planned to be analysed for this endpoint.

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this analysis was planned to be analysed in Cohort 1 reporting groups only.

Statistical analyses

No statistical analyses for this end point

Primary: Cohort 2: Percentage of Participants With AEs From Study Vaccination Through 1 Month After Study Vaccination

End point title	Cohort 2: Percentage of Participants With AEs From Study Vaccination Through 1 Month After Study Vaccination ^[29] ^[30]
-----------------	--

End point description:

An AE was any untoward medical occurrence in a participant temporally associated with the use of study intervention, whether or not considered related to the study intervention. Results excluded local reactions and systemic events data. Safety population included all participants who received the study

intervention and where appropriate informed consent was obtained.

End point type	Primary
End point timeframe:	
From study vaccination through 1 month after study vaccination	

Notes:

[29] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive data was planned to be analysed for this endpoint.

[30] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this analysis was planned to be analysed in Cohort 2 reporting groups only.

End point values	C2 G1:12-17 Years (BNT162b2 Bivalent [WT/OMI BA.4/BA.5] 30mcg)	C2G3: 18-55 Years (BNT162b2 Bivalent [WT/OMI BA.4/BA.5] 60mcg)	C2 G5: >55 Years (BNT162b2 Bivalent [WT/OMI BA.4/BA.5] 60 mcg)	C2G2: 18-55 Years (BNT162b2 Bivalent [WT/OMI BA.4/BA.5] 30mcg)

[47] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive data was planned to be analysed for this endpoint.

[48] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this analysis was planned to be analysed in Cohort 2 reporting groups only.

Statistical analyses

No statistical analyses for this end point

Primary: Cohort 2: Geometric Mean Fold Rise (GMFR) of SARS-CoV-2 Omicron Strain (BA.1 and BA.4/BA.5) and Reference Strain– NTs From Before the Study Vaccination to 1 Month After the Study Vaccination

End point title	Cohort 2: Geometric Mean Fold Rise (GMFR) of SARS-CoV-2 Omicron Strain (BA.1 and BA.4/BA.5) and Reference Strain– NTs From Before the Study Vaccination to 1 Month After the Study Vaccination ^[49] ^[50]
-----------------	--

End point description:

GMFR from before the study vaccination to 1 month after the study vaccination for each strain-specific neutralising titer was reported in this endpoint. GMFRs and 2-sided 95% CIs were calculated by exponentiating the mean logarithm of fold rises and the corresponding CIs (based on the student-t distribution). Assay results below the LLOQ were set to 0.5*LLOQ in the analysis. This endpoint was planned to be analysed in participants from Cohort 2 and control arms of BNT162b2 experienced participants 12-17 years of age, 18-55 years of age and >55 years of age from study C4591031 substudy E. Analysis was performed in EIP with or without evidence of infection up to 1 month post study vaccination. Here, "Number of Participants Analysed" signifies participants evaluable for this endpoint and "n" signifies participants evaluable for specified rows.

End point type	Primary
----------------	---------

End point timeframe:

From before the study vaccination to 1 month after the study vaccination

Notes:

Statistical analyses

No statistical analyses for this end point

Primary: Cohort 4: Percentage of Participants With AEs From Study Vaccination Through 1 Month After Study Vaccination

End point title	Cohort 4: Percentage of Participants With AEs From Study Vaccination Through 1 Month After Study Vaccination ^[57] ^[58]
-----------------	--

End point description:

An AE was any untoward medical occurrence in a participant temporally associated with the use of study intervention, whether or not considered related to the study intervention. Results excluded local reactions and systemic events data. Safety population included all participants who received the study intervention and where appropriate informed consent was obtained.

End point type	Primary
----------------	---------

End point timeframe:

From study vaccination through 1 month after study vaccination

Notes:

[57] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive data was planned to be analysed for this endpoint.

[58] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this analysis was planned to be analysed in Cohort 4 reporting groups only.

End point description:

Seroresponse was defined as achieving ≥ 4 -fold rise in NTs from baseline (before the study vaccination). If the baseline measurement was below the LLOQ, the postvaccination measure of $\geq 4 \times$ LLOQ was considered a seroresponse. Percentage of participants with seroresponse to OMI BA.4/BA.5, XBB.1.5 and reference strain NTs at 1 month after study vaccination are presented as descriptive data. EIP included all eligible randomised/assigned participants who received study intervention to which they were randomised/assigned, had at least 1 valid and determinate immunogenicity result from blood sample collected within 28-42 days after study vaccination, and had no other important protocol deviations as determined by clinician. Analysis was performed in participants with or without evidence of infection up to 1 month post study vaccination. Here, "n" signifies participants evaluable for specified rows.

End point type	Primary
----------------	---------

End point timeframe:

1 month after the study vaccination

Notes:

[67] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive data was planned to be analysed for this endpoint.

[68] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this analysis was planned to be analysed in Cohort 4 reporting groups only.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Local reactions and systemic events: From Day 1 to Day 7 after study vaccination; AE: From study vaccination on Day 1 through 1 month after study vaccination, SAE and Death: From study vaccination on Day 1 through 6 months after study vaccination

Adverse event reporting additional description:

Same event may appear as non-SAE and SAE, what is presented are distinct. Event may be categorised as serious in 1 and non-serious in other, or participant may experience both SAE and non-SAE. Safety population. Per analysis planned, data is summarised and combined for C2/C3 30mcg groups per age category. MedDRA for C1/C4: v27.0; for C2/C3: v26.0.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 July 2022	Inclusion of a second cohort to describe the immune response to BNT162b2 Bivalent (WT/OMI BA.4/BA.5) at 30 mcg in individuals ≥ 12 years of age and at 60 mcg in adults ≥ 18 years of age. Added corresponding objectives, estimands, and endpoints and details in the statistical methods sections. Study intervention details and background information supporting inclusion of this cohort were added. Inclusion of prospective capture of confirmed COVID-19 cases for both Cohorts 1 and 2 with active COVID-19 surveillance and convalescent visits.
24 August 2022	Inclusion of a third cohort to allow for a sufficiently powered evaluation of BNT162b2 Bivalent (WT/OMI BA.4/BA.5) 30 mcg as a second booster dose in BNT162b2-experienced participants ≥ 18 years of age. Added corresponding objectives, estimands, and endpoints and details in the statistical methods sections. Study intervention details and background information supporting inclusion of this cohort were added.
26 May 2023	Inclusion of a fourth cohort to describe the immune response to authorised and new 30 mcg Bivalent and Monovalent Omicron BA.4/BA.5–modified BNT162b vaccines: 1. BNT162b2 Bivalent (Original/OMI BA.4/BA.5) 2. BNT162b5 Bivalent (Original/OMI BA.4/BA.5) 3. BNT162b7 Bivalent (Original/OMI BA.4/BA.5) 4. BNT162b7 Monovalent (OMI BA.4/BA.5) given to mRNA COVID-19 vaccine–experienced participants 18 through 55 years of age. Added corresponding objectives, estimands, and endpoints and details in the statistical methods sections. Study intervention details and background information supporting the inclusion of this cohort were also added.
27 July 2023	Addition of BNT162b6 vaccine into Cohort 4 to describe the immune response to this new 30 mcg Bivalent Omicron BA.4/BA.5–modified BNT162b vaccine: BNT162b6 Bivalent (Original/OMI BA.4/BA.5) given to mRNA COVID 19 vaccine–experienced participants 18 through 55 years of age. Updated corresponding objectives and details in the statistical methods sections. Study intervention details and background information supporting the inclusion of this vaccine were also added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
