

Clinical trial results:

A Phase 3, Open-Label, Single-Arm Study to Assess the Efficacy, Safety, and Pharmacokinetics of Maribavir for the Treatment of Cytomegalovirus (CMV) Infection in Japanese Recipients of a Hematopoietic Stem Cell Transplant (HSCT) or Solid Organ Transplant (SOT)

Summary

EudraCT number	2022-002374-82
Trial protocol	Outside EU/EEA

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 June 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study is to evaluate the efficacy of maribavir in CMV viremia clearance at the end of Study Week 8 (8 weeks after start of administration) in Japanese HSCT or SOT recipients with CMV infection. Also, to assess the safety and tolerability of maribavir in Japanese transplant recipients with CMV infection.

Protection of trial subjects:

This study was conducted in accordance with the protocol, the International Council for Harmonisation Guideline for GCP E6 (ICH GCP, 1996; ICH E6 R2, 2016), Title 21 of the US Code of Federal Regulations (US CFR), the European Union Directives (2001/20/EC; 2005/28/EC), and applicable national and local regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 January 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 41
Worldwide total number of subjects	41
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	34
From 65 to 84 years	7

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 23 sites in Japan from 18 January 2022 to 27 June 2023.

Pre-assignment

Screening details:

A total of 61 Japanese participants with cytomegalovirus (CMV) infection were screened and enrolled, of which 41 participants received maribavir treatment in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Maribavir
-----------	-----------

Arm description:

Participants received maribavir 400 milligrams (mg), oral tablet, twice a day (BID) for up to 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Maribavir
Investigational medicinal product code	
Other name	SHP620, TAK-620
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Maribavir 400 mg, tablets, orally, BID for up to 8 weeks.

Number of subjects in period 1	Maribavir
Started	41
Completed	33
Not completed	8
Adverse event, serious fatal	2
Consent withdrawn by subject	6

End points

End points reporting groups

Reporting group title	Maribavir
Reporting group description:	
Participants received maribavir 400 milligrams (mg), oral tablet, twice a day (BID) for up to 8 weeks.	

Primary: Percentage of Participants Who Achieved Confirmed Clearance of Plasma CMV Deoxyribose Nucleic Acid (DNA) at Week 8

End point title	Percentage of Participants Who Achieved Confirmed Clearance of Plasma CMV Deoxyribose Nucleic Acid (DNA) at Week 8 ^[1]
-----------------	---

End point description:

The confirmed viremia clearance was defined as a plasma CMV DNA concentration below the lower limit of quantification (LLOQ) (that is [i.e.], less than [$<$] 34.5 international units per milliliter [IU/mL]) when assessed by the COBAS® 8800/COBAS® CMV Test, in two consecutive post-baseline samples, separated by at least 5 days. To be considered a responder for the primary endpoint, the participant must have received exclusively study-assigned treatment (regardless of whether study-assigned treatment was completed). FAS included of all participants who had taken at least 1 dose of study treatment.

End point type	Primary
----------------	---------

End point timeframe:

At Week 8

Notes:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 October 2021	-Standardized the deadline for reporting SAE to the sponsor/emergency reception center for safety information (ERCSI) to "within 24 hours of first awareness of the event."- Added cidofovir as currently available systemic anti-CMV agents outside Japan.- Deleted a sentence regarding dose proportionality.- Changed the description of concurrent administration with Cytochrome P450 3A4 (CYP3A4) and P-glycoprotein (P-gp) inducers, focusing on rifampin and maribavir interaction.- Modified the wording of efficacy endpoints and inclusion criteria for clarity and specificity.- Unified the terminology from "beta-human chorionic gonadotropin (β -hCG)" to "human chorionic gonadotropin (hCG)."- Adjusted secondary objectives and endpoints related to CMV infections and resistance.- Modified HIV testing to be available at both local and central laboratories.- Specified the dose of maribavir per dose.- Updated Table 6 "Common Excluded Treatments and Associated Washout Period" and its footnotes.- Revised descriptions of prohibited concomitant medications and treatments to align with changes in Table 6.- Added "CMV history" as an item to be collected at the Screening Visit.- Revised the description of screen failure and eligibility criteria. - Modified CMV genotyping procedures and frequency.- Clarified the terminology related to CMV recurrence and rebound.- Aligned efficacy endpoints with the protocol of Study SHP620-302.- Changed "exploratory" to "secondary" in describing certain analyses.- Added Baseline safety analyses definition.- Included a list of CMV mutations known to confer resistance to valganciclovir and other anti-CMV agents as Appendix 6.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
