

Clinical trial results:

An Open label, Multicenter, Single-arm and Prospective Study to Assess the Efficacy and Safety of Leuprorelin 3M in the Treatment of CPP

Summary

EudraCT number	2022-002471-11
Trial protocol	Outside EU/EEA
Global end of trial date	10 March 2025

Results information

Result version number	v2 (current)
This version publication date	05 February 2026
First version publication date	23 October 2025
Version creation reason

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 March 2025
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	10 March 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main aim of this study was to investigate the efficacy and safety of leuprolide acetate depot 11.25 milligrams (mg) 3-month formulations for the treatment of central precocious puberty (CPP) in children in China.

Protection of trial subjects:

Each participant or their legally authorised representative signed an informed consent form (ICF) before participating in the study.

Background therapy:

NA

Evidence for comparator:

NA

Actual start date of recruitment	14 March 2023
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 79
Worldwide total number of subjects	79
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	79
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

A total of 79 participants took part in the study at 5 investigative sites in China from 14 March 2023 to 10 March 2025.

Pre-assignment

Screening details:

Participants with a diagnosis of central precocious puberty (CPP) received leuprorelin acetate depot 11.25 milligrams (mg).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Leuprorelin Acetate Depot 3M 11.25 mg
-----------	---------------------------------------

Arm description:

Participants with CPP having body weight greater than equal to (\geq)20 kilograms (kg) received the recommended dose of leuprorelin acetate depot 11.25 mg subcutaneous administration (SC) every 12 weeks based on the standard of 30180 micrograms (μ g)/kg/4 weeks for the 24-week Treatment Period. It was not recommended to exceed the dose above 180 μ g/kg.

Arm type	Experimental
Investigational medicinal product name	Leuprorelin Acetate
Investigational medicinal product code	
Other name	Leuprorelin-4002
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Leuprorelin acetate depot 11.25 mg SC every 12 weeks based on the standard of 30180 μ g/kg/4weeks for the 24-week Treatment Period.

Number of subjects in period 1	Leuprorelin Acetate Depot 3M 11.25 mg
Started	79
Completed	77
Not completed	2
Adverse event, non-fatal	1
Lost to follow-up	1

Baseline characteristics

Reporting groups

Reporting group title	Leuprorelin Acetate Depot 3M 11.25 mg
-----------------------	---------------------------------------

Reporting group description:

Participants with CPP having body weight greater than equal to (\geq)20 kilograms (kg) received the recommended dose of leuprorelin acetate depot 11.25 mg subcutaneous administration (SC) every 12 weeks based on the standard of 30180 micrograms (μ g)/kg/4 weeks for the 24-week Treatment Period. It was not recommended to exceed the dose above 180 μ g/kg.

End points

End points reporting groups

Reporting group title	Leuprorelin Acetate Depot 3M 11.25 mg
Reporting group description: Participants with CPP having body weight greater than equal to (\geq)20 kilograms (kg) received the recommended dose of leuprorelin acetate depot 11.25 mg subcutaneous administration (SC) every 12 weeks based on the standard of 30180 micrograms (μ g)/kg/4 weeks for the 24-week Treatment Period. It was not recommended to exceed the dose above 180 μ g/kg.	

Primary: Percentage of Participants with Peak Luteinizing Hormone (LH) Suppression in Gonadotropin-Releasing Hormone (GnRH) Stimulation at Week 24

End point title	Percentage of Participants with Peak Luteinizing Hormone (LH) Suppression in Gonadotropin-Releasing Hormone (GnRH) Stimulation at Week 24 ^[1]
-----------------	--

End point description:

The LH suppression was defined as LH peak value in GnRH stimulation \leq 3.0 international unit per liter (IU/L). The enrolled population set included all the eligible participants enrolled in this study, i.e., all participants enrolled in this study who met the inclusion criteria and did not meet any of the exclusion criteria, regardless of whether they received the study drug.

End point type	Primary
----------------	---------

End point timeframe:

Week 24

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analyses were planned for this end point.

End point values	Leuprorelin Acetate Depot 3M 11.25 mg			
Subject group type	Reporting group			
Number of subjects analysed	79			
Units: percentage of participants				
number (confidence interval 95%)	97.47 (91.15 to 99.69)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with Tanner Stage Regression or No Progression at Week 24

End point title	Percentage of Participants with Tanner Stage Regression or No Progression at Week 24
-----------------	--

End point description:

Tanner Stage was used to measure pubertal development. Tanner Stage was based on progression through 5-stages. The progression was defined as either breast/genitals or pubic hair score had increased score compared with baseline score. Otherwise, the status was classified as regression or no progression. Baseline is defined as the assessment prior to the first dose of study drug. The enrolled population set included all the eligible participants enrolled in this study, i.e., all participants enrolled in

this study who met the inclusion criteria and did not meet any of the exclusion criteria, regardless of whether they received the study drug.

End point type	Secondary
End point timeframe:	
Baseline and Week 24

End point values	Leuprorelin Acetate Depot 3M 11.25 mg			
Subject group type	Reporting group			
Number of subjects analysed	79			
Units: percentage of participants				
number (confidence interval 95%)	84.81 (74.97 to 91.90)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with Decreased First Morning Voided (FMV) Urinary Gonadotropin (Gn) at Week 24

End point title	Percentage of Participants with Decreased First Morning Voided (FMV) Urinary Gonadotropin (Gn) at Week 24
End point description:	
Percentage of participants with reductions from baseline FMV Gn urinary LH and urinary FSH values at	

Week 24 were reported. The enrolled population set included all the eligible participants enrolled in this study, i.e., all participants enrolled in this study who met the inclusion criteria and did not meet any of the exclusion criteria, regardless of whether they received the study drug.

End point type	Secondary
End point timeframe:	
Baseline and Week 24	

End point values	Leuporelin Acetate Depot 3M 11.25 mg			
Subject group type	Reporting group			
Number of subjects analysed	79			
Units: percentage of participants				
number (confidence interval 95%)				
Decrease in FMV Gn Urinary LH Values	62.03 (50.41 to 72.72)			
Decrease in FMV Gn Urinary FSH Values	63.29 (51.69 to 73.86)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Treatment-Emergent Adverse Events (TEAE)

End point title	Number of Participants With Treatment-Emergent Adverse Events (TEAE)
-----------------	--

End point description:

An adverse event (AE) is defined as any untoward medical occurrence in a clinical investigation participant administered a drug; it does not necessarily have to have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (e.g., a clinically significant abnormal laboratory finding), symptom, or disease temporally associated with the use of a drug, whether or not it is considered related to the drug. TEAE is defined as an AE with an onset that occurs after receiving study drug. The safety population set included all included participants who had been under treatment with leuporelin or who were first prescribed leuporelin, received at least one dose and completed one follow-up visit.

End point type	Secondary
End point timeframe:	
From first dose of study drug up to 12 weeks post last dose or early termination Visit (ET) (up to approximately 36 weeks)	

End point values	Leuporelin Acetate Depot 3M 11.25 mg			
Subject group type	Reporting group			
Number of subjects analysed	79			
Units: participants	27			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug up to 12 weeks post last dose or early termination Visit (ET) (up to approximately 36 weeks)

Adverse event reporting additional description:

The safety population set included all included participants who had been under treatment with leuprorelin or who were first prescribed leuprorelin, received at least one dose and completed one follow-up visit.

Assessment type	Systematic
