Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 August 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 August 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Atopic dermatitis (AD) is a skin condition that may cause a rash and itching due to inflammation of the skin. This study compares upadacitinib to dupilumab in adolescent and adult subjects with moderate to severe AD and inadequate response to systemic therapies. Adverse events and change in disease activity will be assessed.

The study is comprised of a 35-day Screening Period, a 16-week treatment Period 1 and a 16-week treatment Period 2. Subjects are randomly assigned to receive upadacitinib Dose A or dupilumab in Period 1. There is a 30-day or 12-week follow-up visit for those on upadacitinib or dupilumab respectively, who won't enter Period 2. In Period 2, subjects will receive upadacitinib Dose A or Dose B for 16 weeks, followed by a 30-day follow-up visit. Approximately 880 adolescent and adult subjects ages 12 to 64 with moderate to severe AD who are candidates for systemic therapy will be enrolled at up to 330 sites worldwide.

Protection of trial subjects:

Adult subjects ≥ 18 years of age at Screening Visit or their legally authorized representative must voluntarily sign and date an informed consent, approved by an independent ethics committee (IEC)/institutional review board (IRB), prior to the initiation of any screening or study-specific procedures and comply with the requirements of this study protocol.

For subjects ≥ 12 and < 18 years of age at Screening Visit: Parent or legal guardian, as required, has voluntarily signed and dated an informed consent form, approved by an IEC, after the nature of the study has been explained and the subject's parent or legal guardian has had the opportunity to ask questions. Subjects will be included in all discussions in order to obtain verbal/and or written assent. Parent/legal guardian and subject must comply with the requirements of this study protocol. If a subject becomes of legal age during the course of the study, that subject will need to be consented using the approved informed consent form.

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	117
Adults (18-64 years)	803
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Eligible subjects were randomized in a 1:1 ratio to receive either upadacitinib (Upa) 15 mg QD or dupilumab (Dup) in Period 1. At Week 16, those with a < EASI 75 response entered Period 2; those from the Dup arm were offered the option to receive Upa 15 mg QD while those from the Upa arm either continued or escalated to Upa 30 mg QD until Week 32.

Period 1

Period 1 title	Period 1 (Baseline – Week 16)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Dupilumab (Period 1)
------------------	----------------------

Arm description:

Adult participants received a loading dose of 600 mg dupilumab by subcutaneous (SC) injection at the Baseline visit followed by 300 mg dupilumab SC every other week (EOW) until Week 16.

Adolescents (12 to 17 years of age and weighing at least 40 kg) received treatment according to their body weight. Participants weighing 40 to < 60 kg received a loading dose of 400 mg dupilumab SC at the Baseline visit followed by 200 mg SC EOW until Week 16. Those weighing 60 kg or more received a loading dose of 600 mg dupilumab SC at the Baseline visit followed by 300 mg dupilumab SC EOW until Week 16.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	
Other name	Dupixent®
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Dupilumab is administered as a subcutaneous (SC) injection.

Arm title	Upadacitinib (Period 1)
------------------	-------------------------

Arm description:

Participants received 15 mg upadacitinib orally once a day (QD) up to Week 16. Starting at Week 4, participants had their dose increased to 30 mg QD if they had a < 50% reduction from Baseline in Eczema Area and Severity Index (EASI 50) response or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average). Starting at Week 8, participants had their dose increased to 30 mg QD if they had a < EASI 75 response.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	
Other name	ABT-494, RINVOQ
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Extended-release tablet

Number of subjects in period 1	Dupilumab (Period 1)	Upadacitinib (Period 1)
Started	462	458
Completed	423	418
Not completed	39	40
Other, not specified	16	16
Lost to follow-up	2	-
Withdrawal by subject	21	24

Period 2

Period 2 title	Period 2 (Week 16 - Week 32)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Dupilumab -> Upadacitinib (Period 2)

Arm description:

At Week 16, participants receiving dupilumab as per its label in Period 1 were reassigned based on their Eczema Area and Severity Index (EASI) response. Those with < EASI 75 were offered the option to receive oral doses of upadacitinib 15 mg QD in Period 2 up to Week 32. Those with ≥ EASI 75 completed the end of study procedures. Starting at Week 20, participants with < EASI 75 or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average) had their dose increased to 30 mg QD up to Week 32.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	
Other name	ABT-494, RINVOQ
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Extended-release tablet

Arm title	Upadacitinib -> Upadacitinib 30 mg (Period 2)
------------------	---

Arm description:

At Week 16, participants receiving upadacitinib in Period 1 were reassigned based on their Eczema Area and Severity Index (EASI) response. Those with < EASI 75 were allocated or continued to receive upadacitinib 30 mg QD in Period 2. Those with ≥ EASI 75 completed the end of study procedures.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	
Other name	ABT-494, RINVOQ
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Number of subjects in period 2^[1]	Dupilumab -> Upadacitinib (Period 2)	Upadacitinib -> Upadacitinib 30 mg (Period 2)
Started	208	147
Completed	198	131
Not completed	10	16
Other, not specified	4	11
Lost to follow-up	3	1
Withdrawal by subject	3	4

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: At Week 16, subjects from both treatment arms in Period 1 with a < EASI 75 response entered Period 2; subjects from the dupilumab arm were offered the option to receive upadacitinib 15 mg QD while subjects from the upadacitinib arm either continued (if already receiving 30 mg) or escalated to upadacitinib 30 mg QD (if receiving 15 mg QD) until Week 32. Those with ≥ EASI 75 completed the end of study procedures.

Baseline characteristics

Reporting groups

Reporting group title	Dupilumab (Period 1)
-----------------------	----------------------

Reporting group description:

Adult participants received a loading dose of 600 mg dupilumab by subcutaneous (SC) injection at the Baseline visit followed by 300 mg dupilumab SC every other week (EOW) until Week 16.

Adolescents (12 to 17 years of age and weighing at least 40 kg) received treatment according to their body weight. Participants weighing 40 to < 60 kg received a loading dose of 400 mg dupilumab SC at the Baseline visit followed by 200 mg SC EOW until Week 16. Those weighing 60 kg or more received a loading dose of 600 mg dupilumab SC at the Baseline visit followed by 300 mg dupilumab SC EOW until Week 16.

Reporting group title	Upadacitinib (Period 1)
-----------------------	-------------------------

Reporting group description:

Participants received 15 mg upadacitinib orally once a day (QD) up to Week 16. Starting at Week 4, participants had their dose increased to 30 mg QD if they had a < 50% reduction from Baseline in Eczema Area and Severity Index (EASI 50) response or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average). Starting at Week 8, participants had their dose increased to 30 mg QD if they had a < EASI 75 response.

Reporting group title	Dupilumab (Period 1)
-----------------------	----------------------

Reporting group description:

Adult participants received a loading dose of 600 mg dupilumab by subcutaneous (SC) injection at the Baseline visit followed by 300 mg dupilumab SC every other week (EOW) until Week 16.

Adolescents (12 to 17 years of age and weighing at least 40 kg) received treatment according to their body weight. Participants weighing 40 to < 60 kg received a loading dose of 400 mg dupilumab SC at the Baseline visit followed by 200 mg SC EOW until Week 16. Those weighing 60 kg or more received a loading dose of 600 mg dupilumab SC at the Baseline visit followed by 300 mg dupilumab SC EOW until Week 16.

Reporting group title	Upadacitinib (Period 1)
-----------------------	-------------------------

Reporting group description:

Participants received 15 mg upadacitinib orally once a day (QD) up to Week 16. Starting at Week 4, participants had their dose increased to 30 mg QD if they had a < 50% reduction from Baseline in Eczema Area and Severity Index (EASI 50) response or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average). Starting at Week 8, participants had their dose increased to 30 mg QD if they had a < EASI 75 response.

Reporting group title	Dupilumab -> Upadacitinib (Period 2)
-----------------------	--------------------------------------

Reporting group description:

At Week 16, participants receiving dupilumab as per its label in Period 1 were reassigned based on their Eczema Area and Severity Index (EASI) response. Those with < EASI 75 were offered the option to receive oral doses of upadacitinib 15 mg QD in Period 2 up to Week 32. Those with \geq EASI 75 completed the end of study procedures. Starting at Week 20, participants with < EASI 75 or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average) had their dose increased to 30 mg QD up to Week 32.

Reporting group title	Upadacitinib -> Upadacitinib 30 mg (Period 2)
-----------------------	---

Reporting group description:

At Week 16, participants receiving upadacitinib in Period 1 were reassigned based on their Eczema Area and Severity Index (EASI) response. Those with < EASI 75 were allocated or continued to receive upadacitinib 30 mg QD in Period 2. Those with \geq EASI 75 completed the end of study procedures.

Primary: Percentage of Participants Achieving a \geq 90% Reduction From Baseline in Eczema Area and Severity Index Score (EASI 90) and Worst Pruritus Numerical Rating Scale of 0 or 1 (WP-NRS 0/1) at Week 16

End point title	Percentage of Participants Achieving a \geq 90% Reduction From Baseline in Eczema Area and Severity Index Score (EASI 90) and Worst Pruritus Numerical Rating Scale of 0 or 1 (WP-NRS 0/1) at Week 16
-----------------	---

End point description:

The EASI is a composite index with scores ranging from 0 to 72. Four AD disease characteristics are assessed for severity on a scale of "0" (absent) through "3" (severe), and area of AD involvement is assessed as a percentage by body area of head, trunk, upper extremities, and lower extremities and converted to a score of 0 to 6. In each body region, the area is expressed as 0, 1 (1% to 9%), 2 (10% to 29%), 3 (30% to 49%), 4 (50% to 69%), 5 (70% to 89%), or 6 (90% to 100%).

The Worst Pruritus NRS was used to report intensity of pruritus during a 24- hour recall period using an electronic hand-held device. Subjects rated itch (pruritus) intensity at its worst on an 11-point scale from 0 (no itch) to 10 (worst imaginable itch).

Analysis population: subjects randomized at Baseline; non-responder imputation incorporating multiple imputation to handle missing data due to COVID-19 or any other missing data that can be reasonably assumed to be Missing at Random (NRI-MI) was used.

Secondary: Percentage of Participants Achieving a Worst Pruritus Numerical Rating Scale of 0 or 1 (WP-NRS 0/1) at Week 2 among Participants with Baseline WP-NRS > 1

End point title	Percentage of Participants Achieving a Worst Pruritus Numerical Rating Scale of 0 or 1 (WP-NRS 0/1) at Week 2 among Participants with Baseline WP-NRS > 1
-----------------	---

End point description:

The Worst Pruritus NRS is an assessment tool that participants used to report the intensity of their pruritus during a 24-hour recall period using an electronic hand-held device. Participants rated itch (pruritus) intensity at its worst during the past 24 hours on an 11-point scale from 0 (no itch) to 10 (worst imaginable itch).

Analysis population: subjects randomized at Baseline; non-responder imputation incorporating multiple imputation to handle missing data due to COVID-19 or any other missing data that can be reasonably assumed to be Missing at Random (NRI-MI) was used.

End point type	Secondary
End point timeframe:	
Baseline and Week 2	

End point values	Dupilumab (Period 1)	Upadacitinib (Period 1)

Secondary: Percentage of Participants Achieving a $\geq 90\%$ Reduction From Baseline in Eczema Area and Severity Index Score (EASI 90) at Week 4

End point title	Percentage of Participants Achieving a $\geq 90\%$ Reduction From Baseline in Eczema Area and Severity Index Score (EASI 90) at Week 4
-----------------	--

End point description:

The EASI is a composite index with scores ranging from 0 to 72. Four AD disease characteristics (erythema, thickness [induration, papulation, edema], scratching [excoriation], and lichenification) assessed for severity on a scale of "0" (absent) through "3" (severe). In addition, the area of AD involvement is assessed as a percentage by body area of head, trunk (including the genital area), upper extremities, and lower extremities (including the buttocks), and converted to a score of 0 to 6. In each body region, the area is expressed as 0, 1 (1% to 9%), 2 (10% to 29%), 3 (30% to 49%), 4 (50% to 69%), 5 (70% to 89%), or 6 (90% to 100%).

Analysis population: subjects randomized at Baseline; non-responder imputation incorporating multiple imputation to handle missing data due to COVID-19 or any other missing data that can be reasonably assumed to be Missing at Random (NRI-MI) was used.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality and adverse events were collected from the time informed consent was signed through the end of the study.

Adverse event reporting additional description:

Median time on follow-up was for 113 days for the Dupilumab (Period 1) group; 114 days for the Upadacitinib (Period 1) group; 225 days for the Dupilumab -> Upadacitinib (Period 2) group; and 224 days for the Upadacitinib -> Upadacitinib 30 mg (Period 2) group.

Reporting groups

Reporting group title	Dupilumab (Period 1)
-----------------------	----------------------

Reporting group description:

Adult participants received a loading dose of 600 mg dupilumab by subcutaneous (SC) injection at the Baseline visit followed by 300 mg dupilumab SC every other week (EOW) until Week 16.

Adolescents (12 to 17 years of age and weighing at least 40 kg) received treatment according to their body weight. Participants weighing 40 to < 60 kg received a loading dose of 400 mg dupilumab SC at the Baseline visit followed by 200 mg SC EOW until Week 16. Those weighing 60 kg or more received a loading dose of 600 mg dupilumab SC at the Baseline visit followed by 300 mg dupilumab SC EOW until Week 16.

Reporting group title	Upadacitinib -> Upadacitinib 30 mg (Period 2)
-----------------------	---

Reporting group description:

At Week 16, participants receiving upadacitinib in Period 1 were reassigned based on their Eczema Area and Severity Index (EASI) response. Those with < EASI 75 were allocated or continued to receive upadacitinib 30 mg QD in Period 2. Those with ≥ EASI 75 completed the end of study procedures.

Reporting group title	Dupilumab -> Upadacitinib (Period 2)
-----------------------	--------------------------------------

Reporting group description:

At Week 16, participants receiving dupilumab as per its label in Period 1 were reassigned based on their Eczema Area and Severity Index (EASI) response. Those with < EASI 75 were offered the option to receive oral doses of upadacitinib 15 mg QD in Period 2 up to Week 32. Those with ≥ EASI 75 completed the end of study procedures. Starting at Week 20, participants with < EASI 75 or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average) had their dose increased to 30 mg QD up to Week 32.

Reporting group title	Upadacitinib (Period 1)
-----------------------	-------------------------

Reporting group description:

Participants received 15 mg upadacitinib orally once a day (QD) up to Week 16. Starting at Week 4, participants had their dose increased to 30 mg QD if they had a < 50% reduction from Baseline in Eczema Area and Severity Index (EASI 50) response or a < 4-point improvement from Baseline in Worst Pruritus Numerical Rating Scale (WP-NRS; weekly average). Starting at Week 8, participants had their dose increased to 30 mg QD if they had a < EASI 75 response.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 May 2023	<p>Version 2.0/Amendment 1 clarified the following points:</p> <ul style="list-style-type: none">• Estimand definition and the handling rule of the intercurrent events• Clarified the primary endpoint• Added additional details for safety assessments, and Tanner Stage assessments included for adolescent subjects required by regulatory agencies• Included that the permanent discontinuation from the study will be mandatory in any subject who has been treated for at least 8 weeks with upadacitinib 30 mg QD and has not achieved an EASI 50 response from Baseline after rescue with TCS for at least 1 week per FDA request• Clarified the eligibility criteria language to enroll subjects < 64 to ensure no subject 65 or older is enrolled and for laboratory values specific to pediatric studies

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
