

Clinical trial results:

Phase 3, Multicenter, Randomized Study with 2 Different Doses of Prucalopride Administered to Male and Female Pediatric Subjects Aged 6 Months to 17 years with Functional Constipation, Consisting of a 12-week Double-blind, Placebo-controlled Part (Part A) to Evaluate Efficacy and Safety Followed by a 36-week Double-blind Extension Part (Part B) to Document Long-term Safety up to Week 48

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 November 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 November 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to evaluate the efficacy of prucalopride during the 12-week double-blind, placebo-controlled treatment phase and long-term (48 weeks) safety and tolerability in toilet-trained participants with functional constipation who are at least 3 years of age.

Protection of trial subjects:

Each participant signed an informed consent form (ICF) before participating in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 July 2021
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	9 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 175
Worldwide total number of subjects	175
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	1
Children (2-11 years)	111
Adolescents (12-17 years)	63
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 42 investigative sites in the United States from 13 July 2021 to 13 November 2023.

Pre-assignment

Screening details:

175 participants were randomised in a 1:1:1 ratio to receive prucalopride at low/high dose/placebo in Part A of study per their body weight. All participants who completed Part A entered Part B, and those in placebo group of Part A were re-randomized based on their weight in 1:1 ratio to receive prucalopride at low/high dose in Part B of the study.

Period 1

Period 1 title	Placebo-controlled Period (12 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A: Placebo

Arm description:

Participants weighing <50 kg drew equal volumes from two bottles of placebo oral solution to account for the daily dose assigned or participants weighing ≥50 kg received two placebo oral tablets, once daily (QD), during 12 weeks in Part A. Prucalopride matching placebo (oral solution or tablet) were dosed depending on the participant's body weight (BW) at the randomization visit.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution, Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo of oral solution or tablet QD.

Arm title	Part A: Low Dose Prucalopride
------------------	-------------------------------

Arm description:

Participants weighing <50 kg received 0.04 milligrams per kilogram (mg/kg) of prucalopride oral solution (drew the required volume from one bottle of 0.4 milligram per milliliter [mg/mL] and one bottle of placebo oral solution), QD or participants weighing ≥50 kg received one 2 milligram (mg) of prucalopride oral tablet and one placebo oral tablet, QD, during 12 weeks in Part A. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Arm type	Experimental
Investigational medicinal product name	Prucalopride
Investigational medicinal product code	
Other name	TAK-555, Prucalopride succinate
Pharmaceutical forms	Tablet, Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received 0.04 mg/kg or 0.08 mg/kg oral solution or 2 mg oral tablet of prucalopride QD.

Arm title	Part A: High Dose Prucalopride
------------------	--------------------------------

Arm description:

Participants weighing <50 kg received 0.08 mg/kg of prucalopride oral solution (drew the required volume from two bottles of 0.4 mg/mL to account for the daily dose assigned), QD or participants weighing ≥50 kg received two 2 mg of prucalopride oral tablets, QD, during 12 weeks of treatment period in Part A. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Arm type	Experimental
Investigational medicinal product name	Prucalopride
Investigational medicinal product code	
Other name	TAK-555, Prucalopride succinate
Pharmaceutical forms	Tablet, Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received 0.04 mg/kg or 0.08 mg/kg oral solution or 2 mg oral tablet of prucalopride QD.

Number of subjects in period 1	Part A: Placebo	Part A: Low Dose Prucalopride	Part A: High Dose Prucalopride

Period 2

Period 2 title	Safety Extension Period (40 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part B: Low Dose Prucalopride

Arm description:

Participants weighing <50 kg received 0.04 mg/kg of prucalopride oral solution (drew the required volume from one bottle of 0.4 mg/mL and one bottle of placebo oral solution to account for the daily dose assigned), QD or participants weighing ≥50 kg received one 2 mg of prucalopride oral tablet and one placebo oral tablet, QD, for 36 weeks during the 40-week Part B Period. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Arm type	Experimental

Primary: Part A: Change from Baseline in Average Number of Weekly Number of Spontaneous Bowel Movements (SBMs) at Week 12

End point title	Part A: Change from Baseline in Average Number of Weekly Number of Spontaneous Bowel Movements (SBMs) at Week 12 ^[2]
-----------------	---

End point description:

Spontaneous bowel movement was defined as a bowel movement that was not preceded within a period of 24 hours by the intake of rescue medication. The average change from baseline in number of SBMs per week derived from the (e-diary) data, in toilet-trained participants who were at least 3 years of age collected during the placebo-controlled part (Part A) was assessed. The Completers Analysis Set included all toilet-trained participants who were at least 3 years of age in the Modified Intent-to-treat Analysis Set (mITT) analysis set who had an average number of SBM available for all 12 weeks in the placebo-controlled part (Part A) of the study.

Secondary: Part A: Change From Baseline in Participants' Weekly Stool Consistency Based on Bristol Stool Form Scale (BSFS) Score at Week 12 Categorized by Age

End point title	Part A: Change From Baseline in Participants' Weekly Stool Consistency Based on Bristol Stool Form Scale (BSFS) Score at Week 12 Categorized by Age
-----------------	---

End point description:

BSFS is a 7-score visual scale to measure stool consistency, 1=Separate hard lumps, hard to pass, 2=Sausage-shaped, but lumpy, 3=Like a sausage but with cracks on the surface, 4=Like a sausage or snake, smooth and soft, 5=Soft blobs with clear-cut edges, 6=Fluffy pieces with ragged edges, a mushy stool, 7=Watery, no solid pieces, entirely liquid. A score of 1 or 2=constipation while a score of 6 or 7=diarrhea. A better score (scores of 3 and 4 represent ideal stools as they are easy to defecate while not containing excess liquid, 5 indicates average consistency but lack of dietary fiber) would trend toward the middle of the scale(3 to 5). Daily scores were summed to obtain a weekly score ranging from 7 to 49 with higher scores indicating diarrhea. Data for this outcome measure is reported per age group bifurcation.mITT Analysis Set=all randomised participants who received at least 1 dose of study drug in Part A. Number of subjects analysed=participants with data available for analyses.

Secondary: Part A: Percentage of Participants With Fecal Incontinence at Week 12

End point title	Part A: Percentage of Participants With Fecal Incontinence at Week 12
-----------------	---

End point description:

Fecal incontinence was defined as unintentional smear or liquid stool in the underwear that is not due to poor wiping. Fecal incontinence can only occur in toilet-trained participants. Non-retentive fecal incontinence is diagnosed (must include at least a 1-month history in a child with a developmental age older than 4 years for all the following): (i) defecation in places inappropriate to the sociocultural context, (ii) no evidence of fecal retention, and (iii) after appropriate evaluation, the fecal incontinence cannot be explained by another medical condition. Percentages are rounded off to the nearest single decimal place. The mITT Analysis Set included all randomised participants who received at least 1 dose of the study drug in Part A. Number of subjects analysed is the number of participants with data available for analyses.

End point type	Secondary
End point timeframe:	
Week 12	

End point values	Part A: Placebo	Part A: Low Dose Prucalopride	Part A: High Dose Prucalopride	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	31	33	30	
Units: percentage of participants				
number (not applicable)	12.9	3.0	16.7	

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Part A: Pharmacokinetic (PK) Plasma Concentrations of Prucalopride

End point title	Part A: Pharmacokinetic (PK) Plasma Concentrations of Prucalopride ^[6]
-----------------	---

End point description:

The PK analysis set included all participants regardless of age in the safety analysis sets for whom at least 1 PK sample was evaluable. Number of subjects analysed is the number of participants with data available for analyses. 'n' signifies the number of participants with data available for analyses at the specified time point.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

1 to 3 hours post-dose at Baseline (Day 0), 14 to 26 hours post-dose at Weeks 4, 8 and 12

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Descriptive pharmacokinetic data was collected and analysed for prucalopride arms only.

End point values	Part A: Low Dose Prucalopride	Part A: High Dose Prucalopride		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	8	12		
Units: nanograms per milliliter (ng/ml)				
arithmetic mean (standard deviation)				
Baseline (1-3 Hours) [n=6,9]	4.707 (± 3.4659)	5.903 (± 4.0231)		
Week 4 (14 -26 Hours) [n=7,8]	2.607 (± 0.7336)	3.693 (± 2.0613)		
Week 8 (14 -26 Hours) [n=6,6]	2.343 (± 1.8725)	2.963 (± 2.0794)		
Week 12 (14 -26 Hours) [n=6,6]	4.365 (± 3.6288)	3.001 (± 4.5358)

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug up to Week 52

Adverse event reporting additional description:

For Part A, the Safety Analysis Set included all participants who received at least 1 dose of study drug in Part A. For Part B, the Safety Analysis Set included all participants who received at least 1 dose of study drug in Part B.

Assessment type	Systematic

Reporting groups

Reporting group title	Part A: Low Dose Prucalopride
-----------------------	-------------------------------

Reporting group description:

Participants weighing <50 kg received 0.04 mg/kg of prucalopride oral solution (drew the required volume from one bottle of 0.4 mg/mL and one bottle of placebo oral solution), QD or participants weighing ≥50 kg received one 2 mg of prucalopride oral tablet and one placebo oral tablet, QD, during 12 weeks in Part A. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Reporting group title	Part A: High Dose Prucalopride
-----------------------	--------------------------------

Reporting group description:

Participants weighing <50 kg received 0.08 mg/kg of prucalopride oral solution (drew the required volume from two bottles of 0.4 mg/mL to account for the daily dose assigned), QD or participants weighing ≥50 kg received two 2 mg of prucalopride oral tablets, QD, during 12 weeks of treatment period in Part A. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Reporting group title	Part A: Placebo
-----------------------	-----------------

Reporting group description:

Participants weighing <50 kg drew equal volumes from two bottles of placebo oral solution to account for the daily dose assigned or participants weighing ≥50 kg received two placebo oral tablets, QD, during 12 weeks in Part A. Prucalopride matching placebo (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Reporting group title	Part B: High Dose Prucalopride
-----------------------	--------------------------------

Reporting group description:

Participants weighing <50 kg received 0.08 mg/kg of prucalopride oral solution (drew the required volume from two bottles of 0.4 mg/mL to account for the daily dose assigned), QD or participants weighing ≥50 kg received two 2 mg of prucalopride oral tablets, QD, for 36 weeks during the 40-week Part B Period. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

Reporting group title	Part B: Low Dose Prucalopride
-----------------------	-------------------------------

Reporting group description:

Participants weighing <50 kg received 0.04 mg/kg of prucalopride oral solution (drew the required volume from one bottle of 0.4 mg/mL and one bottle of placebo oral solution to account for the daily dose assigned), QD or participants weighing ≥50 kg received one 2 mg of prucalopride oral tablet and one placebo oral tablet, QD, for 36 weeks during the 40-week Part B Period. Prucalopride (oral solution or tablet) were dosed depending on the participant's BW at the randomization visit.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 December 2020	The following changes were made as per Amendment 1: 1) Clarified that the primary endpoint was based on data collected during the placebo-controlled part (Part A). 2) Corrected text describing Part B of the study as placebo-controlled. 3) Corrected the population used for the primary estimand of interest from Intent-to-Treat (ITT) to mITT. 4) Corrected the number of bowel movements (BMs) from greater than ($>$)3 to ≥ 3 .
20 October 2021	The following changes were made as per Amendment 2: 1) Added that if a participant weighing ≥ 50 kg could not tolerate the tablets, they could be switched to oral solution for the duration of study participation. Further, switching from oral solution to tablets was not allowed. 2) Revised the frequency for providing rescue medications to align with operational processes. 3) Aligned the screening visit window with wording in the protocol. 4) Added patient global impression of severity (PGI-S) and caregiver global impression of severity (CGI-S) assessments at screening. 5) Specified that if a participant chose to withdraw from study participation due to personal concerns or unavoidable circumstances related to the coronavirus disease 2019 (COVID-19) pandemic (other than a COVID-19-related AE), this had to be specified as the reason for participant withdrawal in the electronic case report form (eCRF). 6) Added details on the anchor-based analysis. 7) Added details of COVID-19-related flexibility in study conduct.
27 October 2022	The following changes were made as per Amendment 3: 1) Updated the exploratory endpoints on "proportion of participants with an average of ≥ 3 (S)BMs per week and increase of ≥ 1 (S)BM compared to baseline during a 12-week double-blind, placebo-controlled treatment phase" and "proportion of participants with an average of ≤ 1 (S)BMs per week during the 12-week double-blind, placebo-controlled treatment phase" to only evaluate SBMs, not BMs. 2) Updated the duration of the study from approximately 60 to approximately 52 months (or from 3-4 to 4-4.5 years of age). 3) Corrected the duration of the screening period from approximately 21 - 33 days (and maximum duration of participation, where mentioned, from 55 - 56 weeks). 4) Added a reminder to check whether the participant had experienced any psychiatric changes throughout the study. 5) Corrected to indicate that restrictions related to lifestyle modifications (including dietary changes) were applicable from randomization onwards and to include the specification that study-allowed rescue medication was not restricted. 6) Added a new section describing what actions should be taken in case of suicidal ideation (SI)/suicidal behavior (SIB).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
12 November 2023	Study was terminated as per the Data Monitoring Committee (DMC) decision owing to futility with no safety concerns.	-

Notes:

Limitations and caveats

None reported
