

## Clinical trial results:

### Efficacy, Safety, Tolerability, Immunogenicity and Pharmacokinetic Evaluation of HYQVIA in Pediatric Subjects with Primary Immunodeficiency Diseases

#### Summary

EudraCT number	2022-003501-29
Trial protocol	Outside EU/EEA
Global end of trial date	20 July 2022

#### Results information

Result version number	v1 (current)
This version publication date	07 February 2023
First version publication date	07 February 2023

#### Trial information

##### Trial identification

Sponsor protocol code	161503
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03277313
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Takeda
Sponsor organisation address	95 Hayden Avenue, Lexington, United States, MA 02421
Public contact	Study Director, Takeda, TrialDisclosures@takeda.com
Scientific contact	Study Director, Takeda, TrialDisclosures@takeda.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 July 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	20 July 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study was to assess the efficacy of HYQVIA treatment in pediatric participants with primary immunodeficiency disease (PID) who received prior intravenous (IV) or subcutaneous (SC) immunoglobulin therapy before enrollment into the study.

Protection of trial subjects:

All study participants and/or their legally authorised representative had to sign an informed consent form (ICF) before entering into the study. Assent was also obtained from the participant as applicable.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 44
Worldwide total number of subjects	44
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	32
Adolescents (12-17 years)	12
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants took part in the study at 19 investigative sites in the United States from 25 September 2017 to 20 July 2022. Pediatric participants with a diagnosis of primary immunodeficiency diseases (PIDD) were enrolled in this study.

### Pre-assignment

Screening details:

Pediatric participants who received IV or non-HYQVIA SC immunoglobulin therapy prior to enrollment received ramp-up doses of HYQVIA in Epoch 1 and at 3- or 4-week intervals in Epoch 2. Epoch 3 was planned for safety follow-up if needed, however no participants continued in Epoch 3. Data is reported only for Epoch 1 and 2.

### Period 1

Period 1 title	Epoch 1 (Six-week Ramp-up Period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Arm title	Epoch 1
-----------	---------

Arm description:

Pediatric participants with PIDD who were on IV or non-HYQVIA SC treatment with immunoglobulin were enrolled and treated with HYQVIA SC with a dose or interval ramp-up period of up to six weeks. HYQVIA dose was planned to be equivalent to 100% ( $\pm$  5%) of pre-study treatment. Dose frequency was one treatment interval of one week, then one treatment interval of two weeks for participants who were planned to be treated every three weeks, and one more treatment interval of three weeks for participants who were planned to be treated every four weeks.

Arm type	Experimental
Investigational medicinal product name	HYQVIA
Investigational medicinal product code	
Other name	IGI 10% with rHuPH20
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Immune Globulin Infusion 10% (Human) with Recombinant Human Hyaluronidase (IGI, 10% with rHuPH20)

Number of subjects in period 1	Epoch 1
Started	44
Completed	43
Not completed	1
Adverse event, non-fatal	1

**Period 2**

Period 2 title	Epoch 2 (36 Months After Epoch 1)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

**Arms**

<b>Arm title</b>	Epoch 2
------------------	---------

Arm description:

Epoch 1 was followed by Epoch 2 with HYQVIA treatment infusions given once every 3 or 4 weeks, depending on the participant's previous IV dosing schedule (for IV pretreated participants) and at the discretion of the investigator and participant (for SC-pretreated participants) up to approximately 36 months.

Arm type	Experimental
Investigational medicinal product name	HYQVIA
Investigational medicinal product code	
Other name	IGI 10% with rHuPH20
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Immune Globulin Infusion 10% (Human) with Recombinant Human Hyaluronidase (IGI, 10% with rHuPH20)

<b>Number of subjects in period 2</b>	Epoch 2
Started	43
Completed	34
Not completed	9
Physician decision	1
Consent withdrawn by subject	6
Adverse event, non-fatal	1
Reason not Specified	1

## Baseline characteristics

### Reporting groups

### Primary: Rate Represented as Mean Number of Acute Serious Bacterial Infections (ASBI) per Participant-year

End point title	Rate Represented as Mean Number of Acute Serious Bacterial Infections (ASBI) per Participant-year <sup>[1]</sup>
End point description:	
The rate of ASBI was defined as the mean number of ASBI per participant-year based on the United States (U.S.) Food and drugs Administration (FDA) guidance for industry to support marketing of human immune globulin intravenous (IGIV) as replacement therapy for primary humoral immunodeficiency and the European Medicines Agency (EMA) guideline on the clinical investigation of human normal immunoglobulin for SC and /or intramuscular administration. ASBI included bacteremia/sepsis, bacterial meningitis, osteomyelitis/septic arthritis, bacterial pneumonia, and visceral abscess, diagnosed according to the Diagnostic Criteria for Acute Serious Bacterial Infections. Full Analysis Set (FAS) included all participants who provided informed consent, and met enrollment eligibility.	
End point type	Primary
End point timeframe:	
From first dose of study drug up to end of Study Epoch 2 (up to approximately 37.2 months)	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical comparison was performed between arms (as this is a single arm study), the ASBI rate was compared to a fixed threshold (1.0) defined by an FDA Guideline.

End point values	Epoch 1 + Epoch 2			
Subject group type	Subject analysis set			
Number of subjects analysed	44			
Units: ASBI per participant-year				
arithmetic mean (standard error)	0.04 ( $\pm$ 0.027)

## Secondary: Treatment Preference and Satisfaction: Change From Baseline in Assessment of Life Quality Index (LQI) Score

End point title	Treatment Preference and Satisfaction: Change From Baseline in Assessment of Life Quality Index (LQI) Score
-----------------	---

End point description:

The LQI is a validated questionnaire assessing participant perceptions of their HRQoL and their treatment specifically among participants who use IgG therapy. This questionnaire covers 4 domains: treatment interferences, therapy-related problems, therapy setting, and treatment costs. The LQI domains are scored from 0 to 100, with higher scores associated with better IgG treatment satisfaction. End of Epoch 2 summarises all participant's data for their last epoch 2 visit (so not including the participant that discontinued in epoch 1). SAS included all participants who received at least one dose of HyQvia. Number of subjects analysed is the number of participants with data available for analyses. Number analysed (n) is the number of participants with data available for analysis at a specified timepoint.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug up to EOS (up to 4 years 9 months)

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of AE and abnormal laboratory findings. Any event spontaneously reported by the participant via the participant diary or observed by the investigator was recorded, irrespective of the relation to study treatment. SAS included all participants who received at least one dose of HYQVIA.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	23.0
--------------------	------

### Reporting groups

Reporting group title	Epoch 2
-----------------------	---------

Reporting group description:

Epoch 1 was followed by Epoch 2 with HYQVIA treatment infusions given once every 3 or 4 weeks, depending on the participant's previous IV dosing schedule (for IV pretreated participants) and at the discretion of the investigator and participant (for SC-pretreated participants) up to approximately 36 months.

Reporting group title	Epoch 1
-----------------------	---------

Reporting group description:

Pediatric participants with PIDD who were on IV or non-HYQVIA SC treatment with immunoglobulin were enrolled and treated with HYQVIA SC with a dose or interval ramp-up period of up to six weeks. HYQVIA dose was planned to be equivalent to 100% ( $\pm$  5%) of pre-study treatment. Dose frequency was one treatment interval of one week, then one treatment interval of two weeks for participants who were planned to be treated every three weeks, and one more treatment interval of three weeks for participants who were planned to be treated every four weeks.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 July 2017	Following changes were implemented with Protocol Amendment 1: -Included word "efficacy" in study title, short study title, and wherever applicable. -Clarified that latest approved version of prescribing Information for United States (US) would be applicable. -Updated study status from planned to ongoing. -Updated study purpose and objectives. -Revised and rearranged secondary and tertiary objectives. -Provided information on testing and characterisation of neutralising anti-rHuPH20. -Updated overall study design. -Clarified time point and location of study completion visit. -Updated blood sample collection information for PK assessments. -Updated study outcome measures. -Revised stopping rules. -Moved GAMMAGARD LIQUID administration instructions to applicable section of protocol. -Provided additional guidance on administration of HYQVIA. -Provided additional clarification that treatment with GAMMAGARD LIQUID will follow guidance of product information and site's standard of care. -Widened range of potential source data documents. -Update text to define exclusion criterion. -Clarified definition of "enrollment" for informed consent. -Updated text to define screening and clarified screening/re-screening procedures and time limit. -Provided additional information regarding timepoints of administration of QoL questionnaires and treatment preference and satisfaction assessments. -Removed redundant information about PK assessments. -Reflected an operational change. -Clarified of data collection method to match secondary outcome measures, and to add LQI to allow for collection of additional QoL data. -Limited investigator's responsibility to report SAEs after study completion. -Deleted requirement of a Non-Medical Complaints (NMC) form, and updated term used for safety monitoring committee. -Updated clinical laboratory sections (hematology, chemistry, anti-rHuPH20 antibodies) and related tables. -Updated statistical section. -Updated schedule of assessments.
24 March 2019	Following changes were implemented with Protocol Amendment 2: -Clarified that the safety follow-up and antibody testing were to continue for 1 year, not less, for all participants who were switched to Epoch 3. -Allowed shorter infusion intervals (e.g., 2 weeks) in Epoch 2 to provide increased flexibility for pediatric participants. -Clarified that for pediatric participants, the full vial of rHuPH20 will not always be needed. -Clarified when rHuPH20 dose adjustments were required. -Clarified the study procedures that were to be performed at scheduled site visits and those that were to be performed outside of scheduled site visits. The schedule of study procedures and assessments was also updated accordingly. -Clarified that blood and urine collection were to occur pre-infusion but may be performed outside the specified time to accommodate the needs of young children. -Confirmed the IgG trough level at study entry without additional blood sampling for the pediatric participants. The clinical laboratory assessments tables were updated to better distribute the blood samples and ensure a baseline IgG trough level and IgG subclasses samples were taken. -Included two additional domains (a Life Quality Index domain and a Global Satisfaction domain) in the HRQoL statistical hypothesis testing. -Included additional descriptive statistics for the healthcare resource utilisation assessments.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
