Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 May 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 April 2024
Global end of trial reached?	Yes
Global end of trial date	23 April 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the ability of study participants with generalized Myasthenia Gravis (gMG) to successfully self-administer rozanolixizumab after training in the self-administration technique using the syringe driver and manual push methods.

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Background therapy as permitted in the protocol

Evidence for comparator:

Not applicable

Actual start date of recruitment	17 April 2023
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 5
Country: Number of subjects enrolled	Georgia: 6
Country: Number of subjects enrolled	Germany: 5
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Japan: 4
Country: Number of subjects enrolled	Poland: 15
Country: Number of subjects enrolled	Serbia: 2
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	United States: 10
Worldwide total number of subjects	62
EEA total number of subjects	32

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	45
From 65 to 84 years	17
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study started to enroll participants in April 2023 and concluded in April 2024.

Pre-assignment

Screening details:

Participant Flow refers to Safety Set (SS) for Training Period and Randomized Safety Set (RSS) for Self-administration Periods 1 and 2.

Period 1

Period 1 title	Training Period (6-weeks)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	All Participants: Training Period
-----------	-----------------------------------

Arm description:

All participants received weekly doses of subcutaneous rozanolixizumab (RLZ) as per their body weight. During the Training Period, the study participants were trained by healthcare professionals on the subcutaneous self-administration of RLZ using both the Syringe Driver (SRD) and Manual Push (MP) methods for 6 weeks before randomization.

Arm type	Experimental
Investigational medicinal product name	Rozanolixizumab
Investigational medicinal product code	UCB7665
Other name	RLZ
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received RLZ with syringe driver or manual push at pre-specified time-points.

Number of subjects in period 1	All Participants: Training Period
Started	62
Completed	55
Not completed	7
Consent withdrawn by participant (not due to AE)	1
Adverse event, non-fatal	3
Not Eligible for SA but continued in study	3

Period 2

Period 2 title	Self-administration Period 1 (6 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence 1: RLZ Syringe driver (SRD) – RLZ Manual Push (MP)

Arm description:

Randomized participants Self-administered RLZ dose subcutaneously as per their body weight with SRD once every week from Week 7 to 12 during Self-administration Period 1 followed by RLZ administered subcutaneously with MP once every week from Week 13 to 18 during Self-administration Period 2. Study has no wash-out period.

Arm type	Experimental
Investigational medicinal product name	Rozanolixizumab
Investigational medicinal product code	UCB7665
Other name	RLZ
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received RLZ with syringe driver or manual push at pre-specified time-points.

Arm title	Sequence 2: RLZ MP – RLZ SRD
------------------	------------------------------

Arm description:

Randomized participants Self-administered RLZ dose subcutaneously as per their body weight with MP once every week from Week 7 to 12 during Self-administration Period 1 followed by RLZ administered subcutaneously with SRD once every week from Week 13 to 18 during Self-administration Period 2. Study had no wash-out period.

Arm type	Experimental
Investigational medicinal product name	Rozanolixizumab
Investigational medicinal product code	UCB7665
Other name	RLZ
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received RLZ with syringe driver or manual push at pre-specified time-points.

Number of subjects in period 2	Sequence 1: RLZ Syringe driver (SRD) – RLZ Manual Push (MP)	Sequence 2: RLZ MP – RLZ SRD
Started	28	27
Completed	23	26
Not completed	5	1
Participant became ineligible for SA	1	-
Consent withdrawn by participant (not due to AE)	-	1
Adverse event, non-fatal	1	-
Diagnosis change to amyotrophic lateral sclerosis	1	-

Missed infusion at Visit 13, SA Period1 incomplete	2	-
---	---	---

Period 3

Period 3 title	Self-administration Period 2 (6 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence 1: RLZ SRD – RLZ MP

Arm description:

Randomized participants Self-administered RLZ dose subcutaneously as per their body weight with SRD once every week from Week 7 to 12 during Self-administration Period 1 followed by RLZ administered subcutaneously with MP once every week from Week 13 to 18 during Self-administration Period 2. Study has no wash-out period.

Arm type	Experimental
Investigational medicinal product name	Rozanolixizumab
Investigational medicinal product code	UCB7665
Other name	RLZ
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received RLZ with syringe driver or manual push at pre-specified time-points.

Arm title	Sequence 2: RLZ MP – RLZ SRD
------------------	------------------------------

Arm description:

Randomized participants Self-administered RLZ dose subcutaneously as per their body weight with MP once every week from Week 7 to 12 during Self-administration Period 1 followed by RLZ administered subcutaneously with SRD once every week from Week 13 to 18 during Self-administration Period 2. Study had no wash-out period.

Arm type	Experimental
Investigational medicinal product name	Rozanolixizumab
Investigational medicinal product code	UCB7665
Other name	RLZ
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received RLZ with syringe driver or manual push at pre-specified time-points.

Number of subjects in period 3	Sequence 1: RLZ SRD – RLZ MP	Sequence 2: RLZ MP – RLZ SRD
Started	23	26
Missed V13 at P1, continued P2	2 ^[1]	0 ^[2]
Completed	23	26

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Two participants missed Visit 13 (Week 12) during Period 1, so were not counted as having completed Period 1. Both participants continued into Period 2.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Two participants missed Visit 13 (Week 12) during Period 1, so were not counted as having completed Period 1. Both participants continued into Period 2.

Baseline characteristics

Reporting groups

Reporting group title	All Participants: Training Period
-----------------------	-----------------------------------

Reporting group description:

All participants received weekly doses of subcutaneous rozanolixizumab (RLZ) as per their body weight. During the Training Period, the study participants were trained by healthcare professionals on the subcutaneous self-administration of RLZ using both the Syringe Driver (SRD) and Manual Push (MP) methods for 6 weeks before randomization.

Reporting group values	All Participants: Training Period	Total	
Number of subjects	62	62	
Age Categorical			
Units: participants			
18 - <65 years	45	45	
65 - <85 years	17	17	
>=85 years	0	0	
Age Continuous			
Units: years			
arithmetic mean	53.3		
standard deviation	± 15.7	-	
Sex: Female, Male			
Units: participants			
Female	35	35	
Male	27	27	

End points

Subject analysis set description:

Randomized participants Self-administered RLZ dose subcutaneously as per their body weight with MP once every week from Week 13 to 18 during Self-administration Period 2.

Subject analysis set title	RLZ Total
Subject analysis set type	Safety analysis

Subject analysis set description:

All study participants who received at least 1 dose of RLZ subcutaneously once every week with SRD or MP in Training Period, SA Period 1 and SA Period 2 for 18 weeks.

Primary: Percentage of participants with Successful Self-administration of rozanolixizumab (with correct use of syringe driver and manual push, respectively) during the Self-administration Period at Visit 13 (Week 12)

End point title	Percentage of participants with Successful Self-administration of rozanolixizumab (with correct use of syringe driver and manual push, respectively) during the Self-administration Period at Visit 13 (Week 12) ^[1]
-----------------	---

End point description:

Successful Self-administration was defined by the participant (i) choosing the correct infusion site, (ii) administering SC, and (iii) delivering the intended dose. The Full Analysis Set (FAS) consisted of all participants who were included in SS, were randomized, and completed both Self-administration periods, in accordance with the randomization scheme.

End point type	Primary
----------------	---------

End point timeframe:

Week 12 (last dose of Self-administration Period 1)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized as descriptive statistics only.

End point values	Period 1: RLZ SRD	Period 1: RLZ MP

No statistical analyses for this end point

Secondary: Percentage of participants with Treatment-Emergent Adverse Events (TEAEs) after syringe driver or manual push Self-administration from Visit 2 (Week 1) up to the End of Study Visit (Visit 21 [Week 26])

End point title	Percentage of participants with Treatment-Emergent Adverse Events (TEAEs) after syringe driver or manual push Self-administration from Visit 2 (Week 1) up to the End of Study Visit (Visit 21 [Week 26])
-----------------	---

End point description:

An Adverse Event (AE) was any untoward medical occurrence in a patient or clinical investigation participant administered a pharmaceutical product, which did not necessarily have a causal relationship with this treatment. An AE could therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal (investigational) product, whether or not

related to the medicinal (investigational) product. A TEAE was defined as an AE starting on or after the date of first administration of rozanolixizumab in the study, up to and including 8 weeks (56 days) after the final dose. SS included all study participants who received at least 1 dose of investigational medicinal product (partial or full). Randomized safety set (RSS) consisted of all participants who are included in SS and were randomized. Here, 'Number of Participants Analyzed' included those participants who were evaluable for the outcome measure.

End point type	Secondary
----------------	-----------

End point timeframe:

From Week 1 up to the End of Study Visit (Week 26)

End point values	Period 1: RLZ SRD	Period 1: RLZ MP	Period 2: RLZ SRD	Period 2: RLZ MP

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Week 1 up to the End of Study Visit (Week 26)

Adverse event reporting additional description:

TEAEs were reported for SS and RSS. The RLZ Total arm included data for all 62 participants from the Training Period to the Safety Follow-Up Period including participants who discontinued during the Training Period or were not randomized but continued in the study.

Assessment type	Non-systematic

occurrences (all)	3		
COVID-19			
subjects affected / exposed	0 / 54 (0.00%)		
occurrences (all)	0		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 November 2022	Protocol Amendment 2 (dated 04 Nov 2022) was implemented to provide an update on the safety information in line with the updated Investigator's Brochure (dated Sep 2022), updates on the adverse events of special monitoring (AESM), and an update on the planned fixed dose of rozanolixizumab based on study participants' body weight. The secondary endpoint related to the occurrence of medication errors, the Schedule of Activities, and the criteria for IMP discontinuation and participant discontinuation from the study were also updated. Additional updates to provide further clarity on the protocol were also incorporated. This amendment was considered to be substantial based on the criteria set forth in Article 10(a) of Directive 2001/20/EC of the European Parliament and the Council of the European Union.
07 September 2023	Protocol Amendment 4 (dated 07 Sep 2023) was implemented to align with the approved label in the USA and with the proposed dosing regimen under review in Europe. This amendment was considered to be substantial based on the criteria set forth in Article 10(a) of Directive 2001/20/EC of the European Parliament and the Council of the European Union.
30 November 2023	Protocol Amendment 5 (dated 30 Nov 2023) was implemented to update the text and reflect the total number of participants screened, and to update the End of Study definition. This amendment was considered to be substantial based on the criteria set forth in Article 10(a) of Directive 2001/20/EC of the European Parliament and the Council of the European Union.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
