

Clinical trial results:

An Open-label Study to Evaluate the Safety, Efficacy, and Pharmacokinetics of REPLAGAL® in Treatment-naïve Chinese Subjects with Fabry Disease

Summary

EudraCT number	2022-004246-35
Trial protocol	Outside EU/EEA
Global end of trial date	03 January 2024

Results information

Result version number	v1 (current)
This version publication date	18 July 2024
First version publication date	18 July 2024

Trial information

Trial identification

Sponsor protocol code	TAK-675-3001
-----------------------	--------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04974749
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 January 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	03 January 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to assess the safety of REPLAGAL in treatment-naïve Chinese participants with Fabry disease.

Protection of trial subjects:

Each participant signed an informed consent form (ICF) before participating in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 May 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 20
Worldwide total number of subjects	20
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	2
Adolescents (12-17 years)	5
Adults (18-64 years)	13
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 6 investigative sites in China from 1 May 2022 to 3 January 2024.

Pre-assignment

Screening details:

A total of 20 participants with Fabry disease were enrolled in this study to receive REPLAGAL for 52 weeks.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	REPLAGAL
-----------	----------

Arm description:

Participants received REPLAGAL 0.2 milligrams per kilogram (mg/kg) body weight, intravenous (IV) infusion, every other week (EOW) from Day 1 (Week 0) up to Week 52.

Arm type	Experimental
Investigational medicinal product name	REPLAGAL
Investigational medicinal product code	
Other name	Agalsidase Alfa, TAK-675
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received REPLAGAL 0.2 mg/kg body weight, infusion, IV, EOW for 52 weeks.

Number of subjects in period 1	REPLAGAL
Started	20
Completed	17
Not completed	3
Consent withdrawn by subject	2
Gestation	1

Baseline characteristics

Reporting groups

Reporting group title	REPLAGAL
-----------------------	----------

Reporting group description:

Participants received REPLAGAL 0.2 milligrams per kilogram (mg/kg) body weight, intravenous (IV) infusion, every other week (EOW) from Day 1 (Week 0) up to Week 52.

Reporting group values	REPLAGAL	Total	
Number of subjects	20	20	
Age Categorical			
Units: Subjects			
Age continuous			
Units: years			
arithmetic mean	30.1		
standard deviation	± 14.90	-	
Gender categorical			
Units: Subjects			
Female	12	12	
Male	8	8	
Race (NIH/OMB)			
Units: Subjects			
American Indian or Alaska Native	0	0	
Asian	20	20	
Native Hawaiian or Other Pacific Islander	0	0	
Black or African American	0	0	
White	0	0	
More than one race	0	0	
Unknown or Not Reported	0	0	
Ethnicity (NIH/OMB)			
Units: Subjects			
Hispanic or Latino	0	0	
Not Hispanic or Latino	20	20	
Unknown or Not Reported	0	0	
Height			
Units: centimeters (cm)			
arithmetic mean	160.47		
standard deviation	± 9.271	-	
Weight			
Units: kilograms (kg)			
arithmetic mean	53.88		
standard deviation	± 10.370	-	
Body Mass Index (BMI)			
BMI = weight (kg)/[height (m)^2]			
Units: kilograms per meter square (kg/m^2)			
arithmetic mean	20.87		
standard deviation	± 3.674	-	

End points

End points reporting groups

Reporting group title	REPLAGAL
Reporting group description:	
Participants received REPLAGAL 0.2 milligrams per kilogram (mg/kg) body weight, intravenous (IV) infusion, every other week (EOW) from Day 1 (Week 0) up to Week 52.	

Primary: Number of Participants With Serious Treatment-emergent Adverse Events (TEAEs)

End point title	Number of Participants With Serious Treatment-emergent Adverse Events (TEAEs) ^[1]
End point description:	
An adverse event (AE) was any untoward medical occurrence in a clinical investigation participant administered a pharmaceutical product and that did not necessarily have a causal relationship with this investigational product (IP) or medicinal product. Serious AE was any untoward medical occurrence (whether considered to be related to investigational product or not) that at any dose: resulted in death, was life-threatening, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant disability/incapacity, was a congenital abnormality/birth defect, and was an important medical event. A TEAE was defined as any event emerging at or after the initiation of treatment with an IP or any existing event that worsened in either intensity or frequency following exposure to the IP until the end of the safety follow-up period. Safety Analysis Set included all participants in the ITT Set who received at least 1 dose of REPLAGAL.	
End point type	Primary
End point timeframe:	
From start of study drug administration up to 14 days after end of treatment (EOT) [up to Week 54]	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

End point values	REPLAGAL			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: participants	2

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Infusion-related Reactions (IRRs)

End point title	Number of Participants With Infusion-related Reactions (IRRs)
-----------------	---------------------------------------------------------------

End point description:

An IRR was defined as an event that began either during or within 24 hours after the start of the infusion, and was judged as related to treatment with the IP. An IRR could be serious or non-serious. Adverse events that were considered IRRs were noted as such in the participant's source documentation. Other AEs which occurred prior to the infusion, along with AEs associated with protocol-defined testing and assessments (example, laboratory testing and physical examinations), which were performed prior to the infusion, were not considered as IRRs. Safety Analysis Set included all participants in the ITT Set who received at least 1 dose of REPLAGAL.

Secondary: Renal Function as Assessed by Change From Baseline in Estimated Glomerular Filtration Rate (eGFR) at Week 52

End point title	Renal Function as Assessed by Change From Baseline in Estimated Glomerular Filtration Rate (eGFR) at Week 52
-----------------	--------------------------------------------------------------------------------------------------------------

End point description:

Renal function was assessed by eGFR using Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) formula for ≥ 18 years participants, $eGFR = 141 \times \min(Scr/\kappa, 1)^{\alpha} \times \max(Scr/\kappa, 1)^{-1.209} \times 0.993^{\text{Age}} \times 1.018$ (if female) $\times 1.159$ (if black) where: Scr is serum creatinine (milligram per

deciliter [mg/dL]); κ is 0.7 for females and 0.9 for males; α is -0.329 for females and -0.411 for males; min indicates the minimum of Scr/κ or 1; max indicates the maximum of Scr/κ or 1. For <18 years participants, Counahan-Barratt equation was used for calculation of eGFR. $\text{eGFR} = (0.43 \times \text{height in centimeter [cm]})/\text{Scr}$ where, Scr is serum creatinine (mg/dL). Renal function as assessed by eGFR was expressed using the unit: milliliters/minute/1.73 meter square (mL/min/1.73m²). Modified Intent-to-treat (mITT) Set included all enrolled participants who had received at least 1 dose of investigational product and completed at least 1 post-baseline efficacy assessment of the endpoints.

End point type	Secondary
End point timeframe:	
Baseline, Week 52	

End point values	REPLAGAL

Secondary: Change From Baseline in Left Ventricular Mass Index (LVMI) at Weeks 16 and 52

End point title	Change From Baseline in Left Ventricular Mass Index (LVMI) at Weeks 16 and 52
-----------------	-------------------------------------------------------------------------------

End point description:

LVMI was measured by echocardiography at the clinical sites, and LVMI was derived using the following formula:

$$\text{LVM [grams]} = 0.8 \times [1.04 \times \{(\text{LVDd} + \text{IVSTd} + \text{PWTd})^3 - \text{LVDd}^3\}] + 0.6$$
, where: LVDd is left ventricular internal diameter (diastolic) (cm), IVSTd is intraventricular septum thickness (diastolic) (cm), and PWTd is posterior wall thickness (diastolic) (cm). LVM indexed to height (LVMI) = $\text{LVM}/\text{height}^{2.7}$ ($\text{g}/\text{m}^{2.7}$), where height was measured in meter. mITT Set included all enrolled participants who had received at least 1 dose of investigational product and completed at least 1 post-baseline efficacy assessment of the endpoints. 'n' denotes the number of participants with data available for analysis at the specified timepoint.

Secondary: Change From Baseline in Left Ventricular Ejection Fraction (LVEF) at Weeks 16 and 52

End point title	Change From Baseline in Left Ventricular Ejection Fraction (LVEF) at Weeks 16 and 52
-----------------	--------------------------------------------------------------------------------------

End point description:

LVEF is the central measure of left ventricular systolic function. LVEF is the fraction of chamber volume ejected in systole (stroke volume) in relation to the volume of the blood in the ventricle at the end of diastole (end-diastolic volume). This was measured by echocardiography at the clinical sites. mITT Set included all enrolled participants who had received at least 1 dose of investigational product and completed at least 1 post-baseline efficacy assessment of the endpoints. 'n' denotes the number of participants with data available for analysis at the specified timepoint.

Secondary: Change From Baseline in Brief Pain Inventory (BPI) Short Form Pain Severity Total Score

End point title	Change From Baseline in Brief Pain Inventory (BPI) Short Form Pain Severity Total Score
End point description:	
The BPI short form is a numeric rating scale that assesses the severity of pain (severity scale), its impact on daily functioning (Pain Interference scale). BPI short form pain severity scale has been reported here. Pain severity scale has 4 questions that assess pain intensity (worst, least, average, right now) on 10-point rating scales (0=No pain to 10=Pain as bad as you can imagine). The pain severity score is calculated as the average of questions, with a total score ranging from 0 to 10 with higher scores indicating more pain. A negative change from baseline indicates better outcome. mITT Set included all enrolled participants who had received at least 1 dose of investigational product and completed at least 1 post-baseline efficacy assessment of the endpoints. Subjects analyzed is the number of participants with pain at baseline. 'n' denotes the number of participants with data available for analysis at the specified timepoint.

Secondary: Serum Clearance of Administered Dose Normalized Based on Body Weight of REPLAGAL

End point title	Serum Clearance of Administered Dose Normalized Based on Body Weight of REPLAGAL
-----------------	----------------------------------------------------------------------------------

End point description:

Clearance is defined as a quantitative measure of the rate at which a drug substance is removed from the body. CL normalized for body weight was reported. $CL = (\text{dose}/AUC) / \text{body weight}$. Clearance was expressed using the unit: milliliters/minute/kilogram (mL/min/kg). Intensive PK Set included participants in the PK Set who provided intensive sampling.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-infusion (0 minutes), during infusion (20 minutes) and end of infusion (40 minutes), and post-infusion at 50, 60, 90, 120, 240, and 360 minutes at Weeks 0 and 28

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From start of study drug administration up to 14 days after EOT (up to Week 54)

Adverse event reporting additional description:

Safety Analysis Set included all participants in the ITT Set who received at least 1 dose of REPLAGAL.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	26.1
--------------------	------

Reporting groups

Reporting group title	REPLAGAL
-----------------------	----------

Reporting group description:

Participants received REPLAGAL 0.2 mg/kg body weight, IV infusion, EOW from Day 1 (Week 0) up to Week 52.

Serious adverse events	REPLAGAL		
Total subjects affected by serious adverse events			
subjects affected / exposed	2 / 20 (10.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Pregnancy, puerperium and perinatal conditions			
Ectopic pregnancy			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Infections and infestations			
Sepsis			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	REPLAGAL		
Total subjects affected by non-serious adverse events subjects affected / exposed	18 / 20 (90.00%)		
Cardiac disorders Angina pectoris subjects affected / exposed occurrences (all)	2 / 20 (10.00%) 4		
Nervous system disorders Headache subjects affected / exposed occurrences (all)	3 / 20 (15.00%) 3		
General disorders and administration site conditions Chest discomfort subjects affected / exposed occurrences (all) Oedema peripheral subjects affected / exposed occurrences (all) Pyrexia subjects affected / exposed occurrences (all)	2 / 20 (10.00%) 2 2 / 20 (10.00%) 2 5 / 20 (25.00%) 6		
Eye disorders Corneal opacity subjects affected / exposed occurrences (all)	2 / 20 (10.00%) 2		
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)	6 / 20 (30.00%) 6		
Renal and urinary disorders Albuminuria subjects affected / exposed occurrences (all) Haematuria subjects affected / exposed occurrences (all)	2 / 20 (10.00%) 2 2 / 20 (10.00%) 2		
Musculoskeletal and connective tissue disorders			

Back pain subjects affected / exposed occurrences (all)	2 / 20 (10.00%) 3		
Bone metabolism disorder subjects affected / exposed occurrences (all)	2 / 20 (10.00%) 2		
Infections and infestations COVID-19 subjects affected / exposed occurrences (all)	13 / 20 (65.00%) 13		
Upper respiratory tract infection subjects affected / exposed occurrences (all)	5 / 20 (25.00%) 14		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 February 2022	The following changes were made as per Amendment 1: 1) Added cardiac LVMI and LVEF assessed by echocardiography test as one of the efficacy assessments. 2) Updated inclusion and exclusion criteria. 3) Added and clarified that the mITT analysis set will be used for efficacy analyses, instead of the ITT set. 4) Updated time points for height and weight measurement. 5) Removed the requirement that participants need to fast for at least 8 hours prior to the blood draw for plasma lyso-Gb3 assessment.
23 May 2023	The following changes were made as per Amendment 2: 1) Added EudraCT number. 2) Updated inclusion criteria. 3) Modified the ITT definition to include all participants enrolled in the study. 4) Added description of BMI calculation. 5) Added 'physical examination finding' to the list of clinical assessments.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
