

Clinical trial results:

A Phase 1, Randomized, Parallel-group, Open-label, Multicenter Study to Evaluate the Pharmacokinetics, Pharmacodynamics and Safety of Vonoprazan (10 or 20 mg Once Daily) in Adolescents With Symptomatic Gastroesophageal Reflux Disease

Summary

EudraCT number	2023-000179-10
Trial protocol	Outside EU/EEA
Global end of trial date	13 June 2023

Results information

Result version number	v1
This version publication date	25 December 2023
First version publication date	25 December 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002703-PIP01-19
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 June 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	13 June 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the pharmacokinetic profile of vonoprazan in adolescent participants with symptomatic gastroesophageal reflux disease (GERD).

Protection of trial subjects:

All aspects of the study were carefully monitored, by the sponsor or its designee, for compliance with applicable government regulation with respect to current good clinical practice and current standard operating procedures.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 May 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 24
Worldwide total number of subjects	24
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	24
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 24 participants were enrolled into this study in the United States between May 2022 and June 2023.

Pre-assignment

Screening details:

The total duration of the study was up to 8 weeks. The Screening Period was up to 4 weeks, Treatment Period was 2 weeks, and safety follow-up phone call was 2 weeks after last study drug administration.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Vonoprazan 10 mg QD

Arm description:

Participants were randomized to receive vonoprazan 10 mg once daily (QD) from Day 1 to Day 14.

Arm type	Experimental
Investigational medicinal product name	Vonoprazan
Investigational medicinal product code	TAK-438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral tablet.

Arm title	Vonoprazan 20 mg QD
------------------	---------------------

Arm description:

Participants were randomized to receive vonoprazan 20 mg QD from Day 1 to Day 14.

Arm type	Experimental
Investigational medicinal product name	Vonoprazan
Investigational medicinal product code	TAK-438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral tablet.

Number of subjects in period 1	Vonoprazan 10 mg QD	Vonoprazan 20 mg QD
Started	12	12
Completed	12	11
Not completed	0	1

Secondary: Number of Participants Experiencing Adverse Events (AEs)

End point title	Number of Participants Experiencing Adverse Events (AEs)
-----------------	--

End point description:

AE: any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a drug. Treatment-emergent adverse event (TEAE): any AE that occurred after the first dose of study drug or at baseline that worsens in either intensity or frequency after the first dose of study drug. Serious AE: any AE for which the following occurred: death, was life threatening, hospitalization or prolongation of hospitalization, persistent or significant disability/incapacity, a congenital anomaly/birth defect, or the AE was deemed an important medical event. Related AE: any AE that follows a reasonable temporal sequence from administration of study drug, or for which possible involvement of the drug cannot be ruled out, although factors other than the study drug may also be responsible. Clinically significant changes from baseline in laboratory test values, (hematology, serum chemistry and urinalysis), electrocardiograms (ECG) and vital signs were reported as AEs.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Day 28

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 April 2022	Reasons for amendment: <ul style="list-style-type: none">- To clarify that participants must be aged 12 to 17 years, inclusive, at time of informed consent and throughout study participation.- To clarify that only select sites will perform gastric pH monitoring in participants deemed clinically indicated by the principal investigator.- To add that all study drug doses be taken on an empty stomach.- To add that the time and content of any meals consumed prior to taking study drug on Day 6 or Day 7 be recorded.- To add details for Day 7 dosing with respect to allowed water and meals.- To clarify that Day -1 assessments are only required for participants undergoing gastric pH monitoring.- To clarify that Day 6 is an optional visit for participants that check in to the clinic in the evening before starting Day 7 assessments.- Remove the Day 14 PK blood collection.- Remove morphology from electrocardiogram assessments.
14 September 2022	Reasons for amendment: <ul style="list-style-type: none">- Increased number of sites from 5 to 12.- Updated information about vonoprazan.- Removed duplicate entry for sucralfate under excluded medications and treatments.- Removed gastrin and pepsinogen I and II assessments.- Removed optional Day 6 visit.- Modified strategy to estimate PK parameters to a population based approach; as a result adjusted PK sampling schedule on Day 7, added PK sampling on Day 14, provided information on when time of dosing and meals should be collected and remove T_{max,ss} and t_{1/2z} PK parameters.- Removed required overnight stay for PK sampling due to revised sampling schedule.- Added details to the 24-hour gastric pH monitoring.- Moved symptom assessments from Day 8 to Day 7.- Updated Schedule of Events and Study Design to reflect above changes.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
