Notes:

General information about the trial

Main objective of the trial:

Substudy (SS) B: Assess safety, tolerability of bivalent BNT162b2 as 3rd/4th doses in participants ≥ 6 months to < 5 years. Compare anti-Omicron BA.4/BA.5 immune response in those receiving 3 prior 3 mcg doses of BNT162b2 vs. 4th dose in Group 2, and Phase 2/3 Study C4591007 participants with 3 doses of 3 mcg BNT162b2. SSC: Assess safety, tolerability of bivalent BNT162b2 as 4th dose in participants 6M- < 5 Y. Evaluate immune responses to 4th dose in this group. SSD: Assess safety, tolerability of bivalent BNT162b2 as 3rd/4th doses in 5-12Y. Compare anti-Omicron BA.4/BA.5 immune response in 5-12Y receiving 3 doses of 10 mcg BNT162b2 vs. 4th dose in Group 2, and Study C4591007 participants with 3 doses of 10 mcg. SSE: Evaluate safety, tolerability of prophylactic BNT162b2 (Omicron XBB.1.5) as a single dose in COVID-19 vaccine-naïve participants ≥ 5 - < 12 years, and immune response compared to vaccine-experienced participants ≥ 12 years of age of BNT162b2 (Omi XBB.1.5) in Study C4591054 SSA.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 September 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 1843
Country: Number of subjects enrolled	Brazil: 29
Country: Number of subjects enrolled	Puerto Rico: 2
Country: Number of subjects enrolled	South Africa: 65
Worldwide total number of subjects	1939
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	145

months)	
Children (2-11 years)	1794
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Substudy (SS)B:1398 participants enrolled, 1397 vaccinated. SSC:100 randomised, 98 vaccinated.SSD:136 enrolled,134 vaccinated. SSE:310 enrolled and vaccinated. Data was reported at study completion date for SSB, SSC, SSD & SSE. PCD for SSA have not been reached; data collection is still ongoing, hence no data reported for SSA.

Period 1

Period 1 title	Baseline Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	SSB: Group 1a: 2 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 6 months to < 2 years who had received two prior doses of BNT162b2 3 microgram (mcg) with the last dose received 60 to 150 days before enrollment in the study were included. Participants received two doses (third and fourth dose) of BNT162b2 3 mcg via intramuscular route in this study. Third dose was administered on Day 1 of this study and fourth dose was administered approximately 2 months after third dose.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSB: Group 1b: 2 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 2 to < 5 years who had received two prior doses of BNT162b2 3 mcg with the last dose received 60 to 150 days before enrollment in the study were included. Participants received two doses (third and fourth dose) of BNT162b2 3 mcg via intramuscular route in this study. Third dose was administered on Day 1 of this study and fourth dose was administered approximately 2 months after third dose.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSB: Group 2a: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 10 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSB: Group 2b: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 10 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSB: Group 3a: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants from C4591007 (NCT04816643) phase 1 trial, aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 3 mcg with the last dose received at least 60 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSB: Group 3b: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants from C4591007 (NCT04816643) phase 1 trial, aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 3 mcg with the last dose received at least 60 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSC: Group 1a: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants

received a single (fourth) dose of BNT162b2 6 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

6 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSC: Group 1b: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single (fourth) dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSC: Group 2a: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single (fourth) dose of BNT162b2 6 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

6 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSC: Group 2b: 3 prior doses of BNT162b2
------------------	--

Arm description:

Participants aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single (fourth) dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms Bivalent BNT162b2 administered intramuscularly.

Arm title	SSD: Group 1: 2 prior doses of BNT162b2
------------------	---

Arm description:

Participants aged 5 to 11 years who had received two prior doses of BNT162b2 10 microgram (mcg) 90 to 240 days before enrollment in the study were included. Participants received a single dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms (original BNT162b2 5 mcg and BNT162b2 Omicron [B.1.1.529 sublineage BA.4/BA.5] 5 mcg) administered intramuscularly.

Arm title	SSD: Group 2: 3 prior doses of BNT162b2
------------------	---

Arm description:

Participants aged 5 to 11 years who had received three prior doses of BNT162b2 10 mcg 90 to 240 days before enrollment in the study were included. Participants received a single dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms (original BNT162b2 5 mcg and BNT162b2 Omicron [B.1.1.529 sublineage BA.4/BA.5] 5 mcg) administered intramuscularly.

Arm title	SSD Group 3: Participants from study C4591007 Phase 1
------------------	---

Arm description:

Participants from C4591007 (NCT04816643) phase 1 trial, aged 5 to 11 years who had received three prior doses of BNT162b2 10 mcg at least 90 days before enrollment in the study were included. Participants received a single dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Bivalent BNT162b2 (original/Omicron BA.4/BA.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms (original BNT162b2 5 mcg and BNT162b2 Omicron [B.1.1.529 sublineage BA.4/BA.5] 5 mcg) administered intramuscularly.

Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms (original BNT162b2 5 mcg and BNT162b2 Omicron [B.1.1.529 sublineage BA.4/BA.5] 5 mcg) administered intramuscularly.

Arm title	SSE: Monovalent BNT162b2 (Omi XBB.1.5) 10 mcg
------------------	---

Arm description:

Participants aged 5 to 11 years who received a single dose of BNT162b2 (Omi XBB.1.5) 10 mcg via intramuscular route on Day 1 of this sub-study.

Arm type	Experimental
Investigational medicinal product name	Monovalent BNT162b2 (Omi XBB.1.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 micrograms BNT162b2 (Omicron XBB.1.5) administered intramuscularly.

Baseline characteristics

Reporting groups

Reporting group title	SSB: Group 1a: 2 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 6 months to < 2 years who had received two prior doses of BNT162b2 3 microgram (mcg) with the last dose received 60 to 150 days before enrollment in the study were included. Participants received two doses (third and fourth dose) of BNT162b2 3 mcg via intramuscular route in this study. Third dose was administered on Day 1 of this study and fourth dose was administered approximately 2 months after third dose.

Reporting group title	SSB: Group 1b: 2 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 2 to < 5 years who had received two prior doses of BNT162b2 3 mcg with the last dose received 60 to 150 days before enrollment in the study were included. Participants received two doses (third and fourth dose) of BNT162b2 3 mcg via intramuscular route in this study. Third dose was administered on Day 1 of this study and fourth dose was administered approximately 2 months after third dose.

Reporting group title	SSB: Group 2a: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 10 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSB: Group 2b: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 10 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSB: Group 3a: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants from C4591007 (NCT04816643) phase 1 trial, aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 3 mcg with the last dose received at least 60 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSB: Group 3b: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants from C4591007 (NCT04816643) phase 1 trial, aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 3 mcg with the last dose received at least 60 days before enrollment in the study were included. Participants received a single dose (fourth) of BNT162b2 3 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSC: Group 1a: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single (fourth) dose of BNT162b2 6 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSC: Group 1b: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 6 months to < 2 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single (fourth) dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSC: Group 2a: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a single (fourth) dose of BNT162b2 6 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSC: Group 2b: 3 prior doses of BNT162b2
-----------------------	--

Reporting group description:

Participants aged ≥ 2 to < 5 years who had received three prior doses of BNT162b2 3 mcg with the last dose received 60 to 240 days before enrollment in the study were included. Participants received a

single (fourth) dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSD: Group 1: 2 prior doses of BNT162b2
-----------------------	---

Reporting group description:

Participants aged 5 to 11 years who had received two prior doses of BNT162b2 10 microgram (mcg) 90 to 240 days before enrollment in the study were included. Participants received a single dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSD: Group 2: 3 prior doses of BNT162b2
-----------------------	---

Reporting group description:

Participants aged 5 to 11 years who had received three prior doses of BNT162b2 10 mcg 90 to 240 days before enrollment in the study were included. Participants received a single dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Reporting group title	SSD Group 3: Participants from study C4591007 Phase 1
-----------------------	---

Reporting group description:

Participants from C4591007 (NCT04816643) phase 1 trial, aged 5 to 11 years who had received three prior doses of BNT162b2 10 mcg at least 90 days before enrollment in the study were included.

Participants received a single dose of BNT162b2 10 mcg via intramuscular route on Day 1 of the study.

Primary: SSB: Percentage of Participants With Local Reactions Within 7 Days After Study Vaccination 1 in Participants Aged ≥ 6 months to < 2 Years

End point title	SSB: Percentage of Participants With Local Reactions Within 7 Days After Study Vaccination 1 in Participants Aged ≥ 6 months to < 2 Years ^{[1][2]}
-----------------	--

End point description:

Local reactions were collected in e-diary or during unscheduled clinical assessments from Day 1 to Day 7 after study vaccination 1. Redness and swelling were measured and recorded in mdu where, 1 mdu = 0.5 cm and were graded as mild (≥ 0.5 to 2.0 cm), moderate (> 2.0 to 7.0 cm), severe (> 7.0 cm) & Grade (G) 4 (necrosis [redness and swelling] or exfoliative dermatitis [redness]). Tenderness at injection site was graded as mild (hurts if gently touched), moderate (hurts if gently touched with crying), severe (causes limitation of limb movement) & G4 ER visit or hospitalisation. G4 were classified by investigator or medically qualified person. Percentage of participants with local reactions within 7 days after study vaccination 1 and associated 2-sided 95% CI based on Clopper and Pearson method. Safety population = all participants receiving at least 1 dose of study intervention. Here, n = participants evaluable for the specified rows.

End point type	Primary
----------------	---------

End point timeframe:

Day 1 up to Day 7 after study vaccination 1 (i.e. third dose for Group 1a and fourth dose for Groups 2a and 3a) Description

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is specific to SSB; hence, only arms for SSB were included.

Percentage of participants reporting AEs within 1 month after study vaccination were reported in this endpoint. Exact 2-sided CI was calculated using the Clopper and Pearson method. Only AEs collected by non-systematic assessment (i.e., excluding local reactions and systemic events) were reported in this endpoint. Safety population included all participants who received at least 1 dose of the study intervention. N=participants evaluable for this endpoint. This endpoint is reported for Group 1b only as only participants from Group 1b received two vaccinations in the study.

End point type	Primary
----------------	---------

End point timeframe:

From study vaccination 2 up to 1 month after study vaccination 2

Notes:

[22] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

[23] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is specific to SSB; hence, only arms for SSB were included.

End point values	SSB: Group 1b: 2 prior doses of BNT162b2			
Subject group type	Reporting group			
Number of subjects analysed	12			
Units: Percentage of participants				
number (confidence interval 95%)	8.3 (0.2 to 38.5)

Primary: SSB: GMR Based on Geometric Mean Titers of Severe Acute Respiratory

Syndrome Coronavirus 2 (SARSCoV2) Omicron (BA.4/BA.5)–Neutralizing Titers at 1 Month After Dose 4 for Group 2 and at 1 Month After Dose 3 for C4591007 Phase 2/3 Participants

End point title	SSB: GMR Based on Geometric Mean Titers of Severe Acute Respiratory Syndrome Coronavirus 2 (SARSCoV2) Omicron (BA.4/BA.5)–Neutralizing Titers at 1 Month After Dose 4 for Group 2 and at 1 Month After Dose 3 for C4591007 Phase 2/3 Participants ^[26]
-----------------	---

End point description:

GMTs and the corresponding 2-sided CIs were calculated by exponentiating the least square means and the corresponding CIs based on analysis of log-transformed assay results using a linear regression model with baseline log-transformed neutralizing titers, postbaseline infection status & vaccine group as covariates. Assay results below the LLOQ were set to 0.5*LLOQ. Evaluable immunogenicity population included all eligible participants who received the study intervention to which they were assigned, had at least one valid and determinate immunogenicity result from the blood sample collected within 28-42 days after the study vaccination, had no other important protocol deviations as determined by clinician. Results are presented for per-protocol subset which included random sample of 240 participants selected from the full group & comprised the same percentages of participants in each age group and baseline SARS-CoV-2 infection status group as the full group. 'N' = participants evaluable.

End point type	Primary

Primary: SSD: Percentages of Participants With Seroresponse to the Omicron (BA.4/BA.5)– Neutralizing Titers at 1 Month After Dose 4 for Group 2 and C4591007 Phase 2/3 Participants (1 Month After Dose 3)

End point title	SSD: Percentages of Participants With Seroresponse to the Omicron (BA.4/BA.5)– Neutralizing Titers at 1 Month After Dose 4 for Group 2 and C4591007 Phase 2/3 Participants (1 Month After Dose 3) ^[66]
-----------------	---

End point description:

Seroresponse was defined as achieving ≥ 4 -fold rise from baseline (before Dose 4 for C4591048 Substudy D Group 2 and before Dose 3 for C4591007). If the baseline measurement was below the lower limit of quantification (LLOQ), the postvaccination assay result of $\geq 4 \times$ LLOQ was considered a seroresponse. Exact 2-sided 95% CI was based on the Clopper and Pearson method. Percentage of participants achieving seroresponse at 1 month after study vaccination was reported in this endpoint. Evaluable immunogenicity population was analyzed. Results include those from a comparator group of C4591007 (NCT04816643) Phase 2/3 participants of the same age who received 3 doses of original BNT162b2 10 µg as of the data cutoff date of 27 May 2022. Participants with or without evidence of prior infection were included in the analysis. 'N'=participants evaluable for this endpoint.

End point type	Primary

End point description:

An AE was defined as any untoward medical occurrence in a clinical study participant, temporally associated with the use of study vaccination, whether or not considered related to the study vaccination. Percentage of participants reporting AEs within 1 month after study vaccination were reported in this endpoint. Only AEs collected by non-systematic assessment (i.e., excluding local reactions and systemic events) were reported in this endpoint. Safety population consisted of all participants who had received at least 1 dose of the study intervention.

End point type	Primary
----------------	---------

End point timeframe:

Within 1 Month after study vaccination

Notes:

[72] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

[73] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is specific to SSE; hence, only arms for SSE were included.

End point values	SSE: Monovalent BNT162b2 (Omi XBB.1.5) 10 mcg			
Subject group type	Reporting group			
Number of subjects analysed	310			
Units: Percentage of Participants				
number (confidence interval 95%)	3.5 (1.8 to 6.3)

End point title	SSB: GMFR of SARS-CoV-2 Omicron BA.4/BA.5–Neutralizing Titers From Dose 3 to 1 Month After Dose 3: Group 1 Only ^[89]
-----------------	---

End point description:

GMFR of SARS-CoV-2 omicron BA.4/BA.5-neutralizing titers from dose 3 to 1 month after dose 3 was reported in this endpoint. GMFRs and 2-sided 95% CIs were calculated by exponentiating the mean logarithm of fold rises and the corresponding CIs (based on the Student t distribution). Assay results below the LLOQ were set to 0.5*LLOQ in the analysis. Evaluable immunogenicity population (third dose) included all eligible participants who received first study intervention as third dose to which they were assigned, had at least one valid and determinate immunogenicity result from the blood sample collected within 28-42 days after the third dose, and had no other important protocol deviations as determined by the clinician. Participants with or without evidence of prior infection were included in the analysis. 'N'=participants evaluable for this endpoint.

End point type	Secondary

GMFRs and 2-sided 95% CIs were calculated by exponentiating the mean logarithm of fold rises and the corresponding CIs (based on the Student t distribution). Assay results below the LLOQ were set to 0.5 × LLOQ in the analysis. Evaluable immunogenicity population was analyzed. Results include those from a comparator group of C4591007 (NCT04816643) Phase 2/3 participants of the same age who received 3 doses of original BNT162b2 10 µg as of the data cutoff date of 27 May 2022. Participants with or without evidence of prior infection were included in the analysis. 'N'=participants evaluable for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

1 month after Dose 4 for Group 2 and 1 month after Dose 3 for C4591007 control arm

Notes:

[103] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is specific to SSD; hence, only arms for SSD were included.

End point values	SSD: Group 2: 3 prior doses of BNT162b2	SSD Historical cohort: C4591007 BNT162b2 10 mcg

-----------------	--

End point description:

Seroresponse was defined as achieving ≥ 4 -fold rise from baseline (before Dose 4 for C4591048 Substudy D Group 2 and before Dose 3 for C4591007). If the baseline measurement was below the lower limit of quantification (LLOQ), the postvaccination assay result of $\geq 4 \times \text{LLOQ}$ was considered a seroresponse. Exact 2-sided 95% CI, based on the Clopper and Pearson method. Percentage of participants achieving seroresponse at 1 month after study vaccination was reported in this endpoint. Evaluable immunogenicity population was analyzed. Results include those from a comparator group of C4591007 (NCT04816643) Phase 2/3 participants of the same age who received 3 doses of original BNT162b2 10 µg as of the data cutoff date of 27 May 2022. Adverse events

Adverse events information

Timeframe for reporting adverse events:

Local reactions/systemic events(systematic assessment):upto Day(D)7 after vaccination.Non-SAEs(non-systematic assessment):From D1-1 month(M)after study vaccination.For All-cause mortality/SAE (non-systematic assessment) from D1-6M after study vaccination.

Adverse event reporting additional description:

Same event may appear as both non-SAE and SAE. However, what is presented are distinct events. An event may be categorized as serious in one participant and non-serious in another participants, or one participant may have experienced both serious and non-serious event during the study. MedDRA version used for sub-study E is 27.0

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2022	Amendment 1: SSB: Updated section 1.1 Increased samples size in Group 2 to 300 and Group 3 to 3600; Decreased the number of days since last dose prior to enrollment in Group 3 to 60 days;Removed restriction on Group 3 that only participants from the C4591007 study in Phase 1 could participate; Updated section 10.8.3: Updated and added objectives, estimands, and endpoints to demonstrate noninferiority with respect to the level of neutralizing titers and the seroresponse rate of the anti-reference-strain immune response;Updated Section 10.8.9.1.2: Added multiplicity adjustment method for evaluating superiority and noninferiority with respect to level of neutralizing titer for GMR and seroresponse rate; Updated Section 10.8.9.3.2:Clarified immunogenicity endpoint analysis and success criterion for newly added superiority and noninferiority of anti-Omicron BA.4/BA.5 immune response objective;Updated Section 10.8.9.5 Added sample size and power calculation for the newly added superiority and noninferiority of anti- Omicron and anti-reference-strain immune response objectives SSD: Updated section 1.1 :Decreased the number of days since last dose prior to enrollment in Group 3 to 90 days. Updated Sections 10.7.5.2, 10.8.5.2, 10.9.5.2, 10.10.5.2 Exclusion Criteria Substudy A, B, C, D: Added radiotherapy,within 60 days before enrollment. Updated section 10.10.3 Clarified that the primary immunogenicity comparison would be between the SSD Group 1 to C4591007 Phase 2/3 participants and made editorial change to the estimands. Updated section 10.10.1.2: Removed 1-month postdose blood draw group 3 only. Updated section 10.10.1.3.2: Added the group numbers to rows specific to blood sample collection. Updated section 10.10.1.3.2: Added row specific to Group 3 blood draw to be collected at baseline only.
18 November 2022	Amendment 2: Updated high-level overview table to reflect Substudy C updates Section 1.1 Synopsis; Updated Substudy C study design text to reflect defined age groups and update to sample size in Section 1.1 Synopsis, Section 10.9.1.2 Schema, Section 10.9.4.1 Overall Design, Section 10.9.6.4 Blinding; Clarified AE reporting guidance for potential COVID-19/MIS-C illnesses and their sequelae to be consistent with Section 8.4.7
01 August 2023	Amendment 3: SSB: Updated Section 10.8.3: Added a secondary immunogenicity endpoint for SARS-CoV-2 reference-strain- neutralizing titers(previously omitted) SSC: Updated Section 10.9 Removed all references to the Phase 2/3 portion of Substudy C;Updated Section 10.9.1 Updated expanded enrollment numbers in Substudy C Phase 1 to reflect actual enrollment figures SSD: Updated section: 10.10.3: Added "at 1 month after Dose 4" to the second primary immunogenicity objective.
01 September 2023	Amendment 4:SSB: Updated Section 10.8.3 and Section 10.8.9.3.2 Removed objectives for immunogenicity comparisons related to Group 1. Section 10.8.9.2 Corrected the description of the all-available immunogenicity population to reflect all assigned participants instead of all randomized participants.SSC: Updated Section 10.9.3 and Section 10.9.9.3. Removed the analysis across both age groups combined. 2SSD: Updated section 10.10.3 and 10.10.9.3.2: Removed objectives for immunogenicity comparisons and descriptive summaries related to Group 1. Added a new Substudy E to evaluate a single dose of BNT162b2 (Omi XBB.1.5) in COVID-19 vaccine-naïve individuals ≥ 2 to 12 years of age.

05 July 2024	Amendment 5: Updated Substudy E primary and secondary objectives, statistical hypotheses, and the primary, secondary, and tertiary endpoints, estimands, and analyses Updated Section 10.11.3 Objectives, Estimands, and Endpoints, Section 10.11.9.1 Statistical Hypotheses, and Section 10.11.9.3 Statistical Analyses. updated inclusion and exclusion criteria for Substudy E; Updated Section 10.7.5.2 Exclusion Criteria, Section 10.11.5.1 Inclusion Criteria, and Section 10.11.5.2 Exclusion Criteria; Updated the timing of the statistical analyses for Substudy E Section 10.11.9.4.1 Analysis Timing Updated Substudy E immunogenicity assessments Updated Section 10.11.9.5 Sample Size Determination
