

## Clinical trial results:

### A Randomized, Open-Label, Parallel-Group Study to Evaluate the Safety and Efficacy of Abrocitinib 100 mg and 200 mg Tablets in Participants Aged 12 Years and Older with Moderate to Severe Atopic Dermatitis in India

#### Summary

EudraCT number	2024-000141-26
Trial protocol	Outside EU/EEA
Global end of trial date	14 March 2024

#### Results information

Result version number	v1 (current)
This version publication date	30 August 2024
First version publication date	30 August 2024

#### Trial information

##### Trial identification

Sponsor protocol code	B7451094
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05375929
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 July 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 March 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Main study: To evaluate the safety of abrocitinib in participants aged 12 years and older with moderate to severe atopic dermatitis (AD). Substudy: To evaluate the potential effects of abrocitinib on bone development in adolescent participants 12 to less than (<) 18 years of age, as assessed by knee magnetic resonance imaging (MRI).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 July 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	India: 200
Worldwide total number of subjects	200
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	33
Adults (18-64 years)	156
From 65 to 84 years	11
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 200 participants aged greater than or equal to ( $\geq$ ) 12 years with moderate to severe atopic dermatitis (AD) were enrolled in the study. As per statistical analysis plan (SAP) participants' disposition, and discontinuation were to be summarized by treatment arm.

### Pre-assignment

Screening details:

Study had main study and substudy. Adolescent participants consented for substudy at main study inform consent/assent to receive study intervention assigned in the main study after the 12-week treatment period, until 1 year after randomization in the main study or until they turned 18.

### Period 1

Period 1 title	Overall Study: Treatment
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Main Study: Abrocitinib 200 mg QD

Arm description:

Participants received abrocitinib 200 milligram (mg), orally once daily (QD) for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Abrocitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received abrocitinib 200 mg, orally QD for 12 weeks.

<b>Arm title</b>	Main Study: Abrocitinib 100 mg QD
------------------	-----------------------------------

Arm description:

Participants received abrocitinib 100 mg, orally QD for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Abrocitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received abrocitinib 100 mg, orally QD for 12 weeks.

<b>Arm title</b>	Substudy: Abrocitinib 200 mg
------------------	------------------------------

Arm description:

Eligible adolescent participants who received abrocitinib 200 mg orally QD for 12 weeks in main study, continued to receive the same treatment in similar way until 1 year after randomization (on Day 1) from main study.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Abrocitinib

### Primary: Number of Participants With Adverse Events (AEs) and Serious AEs (SAEs): Main Study

End point title	Number of Participants With Adverse Events (AEs) and Serious AEs (SAEs): Main Study <sup>[1]</sup>
-----------------	--

#### End point description:

An AE was any untoward medical occurrence in a participant or clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly; was a suspected transmission via a Pfizer product of an infectious agent, pathogenic or non-pathogenic or other situations where medical or scientific judgement should be exercised by investigator. AEs included SAEs and all non-SAEs. Safety analysis set included all participants randomly assigned to study intervention and who had taken at least 1 dose of study intervention. Participants were analyzed according to the treatment they actually received.

End point type	Primary
----------------	---------

#### End point timeframe:

From Day 1 of dosing up to 4 weeks post last dose (maximum up to Week 16)

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned for this endpoint.

End point values	Main Study: Abrocitinib 200 mg	Main Study: Abrocitinib 100 mg		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	99	101		
Units: Count of Participants				
AEs	30	26		
SAEs	0	1		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of Participants Achieving Eczema Area and Severity Index (EASI) Response $\geq$ 75% Improvement From Baseline at Week 12: Main Study

End point title	Percentage of Participants Achieving Eczema Area and Severity Index (EASI) Response $\geq$ 75% Improvement From Baseline at Week 12: Main Study
-----------------	---

#### End point description:

EASI evaluated severity of participant's AD based on both severity of lesion clinical signs and % of body surface area (BSA) affected. Severity of clinical signs of AD (erythema [E], induration/papulation [I], excoriation [Ex] and lichenification [L]) scored separately for each of 4 body regions (head and neck [h], upper limbs [u], trunk [t]-[including axillae and groin] and lower limbs [l]-[including buttocks]) on 4-point scale: 0= absent; 1= mild; 2= moderate; 3= severe. EASI area score was based upon % BSA with AD in body region: 0 (0%), 1 (>0 to <10%), 2 (10 to <30%), 3 (30 to <50%), 4 (50 to <70%), 5 (70 to <90%) and 6 (90 to 100%). Total EASI score =  $0.1 \times Ah \times (Eh + Ih + Exh + Lh) + 0.2 \times Au \times (Eu + Iu + Exu + Lu) + 0.3 \times At \times (Et + It + Ext + Lt) + 0.4 \times Al \times (El + Il + Exl + Ll)$ ; A = EASI area score. EASI score range: 0.0 to 72.0, higher scores = greater severity. Full analysis analyzed. NRI applied. Number of Participants Analyzed = participants evaluable.

### Secondary: Percentage of Participants Who Achieved Investigator's Global Assessment (IGA) Score of Clear (0) or Almost Clear (1) and $\geq 2$ Points Improvement From Baseline at Week 12: Main Study

End point title	Percentage of Participants Who Achieved Investigator's Global Assessment (IGA) Score of Clear (0) or Almost Clear (1) and $\geq 2$ Points Improvement From Baseline at Week 12: Main Study
-----------------	--

End point description:

IGA assesses severity of AD on 5-point scale. Scores: 0= clear (no AD inflammatory signs except for any residual discolouration [post-inflammatory hyperpigmentation and/or hypopigmentation]); 1= almost clear (AD not entirely cleared- light pink residual lesions [except post-inflammatory hyperpigmentation], just barely perceptible erythema, papulation/induration lichenification, excoriation and no oozing/crusting); 2= mild (AD with light red lesions, slight but definite erythema, papulation/induration, lichenification, excoriation and no oozing/crusting); 3= moderate (AD with red lesions, moderate erythema, papulation/induration, lichenification, excoriation and slight oozing/crusting); 4= severe (AD with deep dark red lesions, severe erythema, papulation/induration, lichenification, excoriation and moderate to severe oozing/crusting). Full analysis set analyzed. Non-responder imputation (NRI) applied. Number of Participants Analyzed = participants evaluable.

### Secondary: Change From Baseline in Patient-Oriented Eczema Measure (POEM) Score at Weeks 2, 4, 8 and 12: Main Study

End point title	Change From Baseline in Patient-Oriented Eczema Measure (POEM) Score at Weeks 2, 4, 8 and 12: Main Study
End point description: POEM is a 7-item participant reported outcome (PRO) measure to assess the impact of AD over the past week. Items were: dryness or roughness of skin in day, skin being itchy in day, skin flaking off in day, skin cracking in day, skin bleeding in day, skin weeping or oozing in day and sleep disturbed in night. Each item is scored from 0 to 4, depending on number of days/night (for sleep items) over the past week symptoms happened, where 0= no days, 1= "1-2 days", 2= "3-4 days", 3= "5-6 days" and 4= "every day". Scores from all items are added up, which results in POEM score, ranging from 0 to 28, higher scores = greater severity and greater symptom burden. FAS evaluated. Participants were analyzed according to the treatment arm they were randomized to. All participants reported under Number of Participants Analyzed contributed data to the table but may not have evaluable data for every row.

### Secondary: Percentage of Participants Achieving Scoring Atopic Dermatitis (SCORAD) Response ≥ 75% Improvement From Baseline at Week 12: Main Study

End point title	Percentage of Participants Achieving Scoring Atopic Dermatitis (SCORAD) Response ≥ 75% Improvement From Baseline at Week 12: Main Study
-----------------	---

End point description:

SCORAD: scoring index for AD combining extent (A), severity (B), subjective symptoms (C). A: rule of 9 was used to calculate BSA affected by AD as a % of whole BSA for each body region- head and neck 9%; upper limbs 9% each; lower limbs 18% each; anterior trunk 18%; back 18%; 1% for genitals. Score for each body region was added to determine A (0-100). B: severity of each sign (erythema; edema; oozing; excoriation; lichenification; dryness) assessed as none =0, mild =1, moderate =2, severe =3. Severity scores were added to give B (0-18). C: pruritus and sleep, each was scored by participant/caregiver using visual analogue scale (VAS) where 0= no itch/no sleeplessness and 10= worst imaginable itch/sleeplessness. Scores for itch and sleeplessness were added to give C (0-20). Total SCORAD was calculated:  $A/5 + 7*B/2 + C$ ; SCORAD range from 0-103; higher SCORAD scores = greater severity. Full analysis analyzed. NRI applied. Number of Participants Analyzed = participants evaluable.

## Secondary: Change From Baseline in Atopic Dermatitis Control Tool (ADCT) Score at Weeks 2, 4, 8 and 12: Main Study

End point title	Change From Baseline in Atopic Dermatitis Control Tool (ADCT) Score at Weeks 2, 4, 8 and 12: Main Study
-----------------	---

End point description:

ADCT score is used to measure the participants perceived AD control. It consists of 6 questions (overall severity of symptoms, days with intense episodes of itching, intensity of bother, problem with sleep, impact on daily activities, and impact on mood or emotions) which are evaluated over the past week on scale from 0 to 4. Scores from all 6 questions are added up to provide ADCT score, ranging from 0 to 24, where higher scores indicate lower AD control. FAS included all participants randomly assigned to study intervention and had taken at least 1 dose of study intervention. Participants were analyzed according to the treatment arm they were randomized to. All participants reported under Number of Participants Analyzed contributed data to the table but may not have evaluable data for every row.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Main Study: From Day 1 of dosing up to 4 weeks post last dose (last dose at Week 12, maximum follow-up till Week 16); Sub Study: From Day 1 of dosing (in main study) up to 4 weeks post last dose (last dose at Year 1, maximum follow-up till Year 1.08)

Adverse event reporting additional description:

Same event may appear as both AE and SAE but are distinct events. An event may be categorized as serious in 1 participant and non-serious in another, or a participant may have experienced both SAE and non-SAE. MedDRA used: for main study v 26.0; for substudy v 27.0. Safety analysis set used for main study; substudy analysis set used for substudy.

Assessment type	Non-systematic

**More information**

**Substantial protocol amendments (globally)**

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 March 2022	Added SCORAD efficacy assessment for atopic dermatitis as a secondary endpoint. Added laboratory tests at end of treatment (EoT) visit of the substudy. Updated substudy schedule of assessments (SoA) and relevant sections.

Notes:

---

**Interruptions (globally)**

Were there any global interruptions to the trial? No

**Limitations and caveats**

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

One participant was randomized to abrocitinib 200 mg arm but received abrocitinib 100 mg, hence for safety analysis set of main study that participant was included in 100 mg arm and for full analysis set that participant was included in 200 mg arm.

Notes:
