Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	25 April 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 March 2024
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

SSA: Describe the safety & tolerability profile of BNT162b2 (Omi XBB.1.5) 30 micrograms (mcg) in messenger ribonucleic acid (mRNA) coronavirus disease 2019 (COVID-19) vaccine-experienced participants ≥ 12 years of age & describe immune response to BNT162b2 (Omi XBB.1.5) 30 mcg & to bivalent BNT162b2 (WT/Omi BA.4/BA.5) 30 mcg in mRNA COVID-19 vaccine-experienced participants ≥ 12 years of age. SSB: Describe the safety & tolerability profile of BNT162b2 (Omi XBB.1.5) 30 mcg given as a single dose to COVID-19 vaccine-naïve participants who were previously SARS-CoV-2 exposed, ≥ 12 years of age & demonstrate the noninferiority with respect to level of neutralizing titer & with respect to seroresponse rate of the anti-XBB.1.5 immune response elicited by BNT162b2 (Omi XBB.1.5) 30 mcg given as a single dose to COVID-19 vaccine-naïve participants, who were previously SARS-CoV-2 exposed, ≥ 12 years of age compared to BNT162b2 (Omi XBB.1.5) 30 mcg given to vaccine-experienced participants in SSA.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 August 2023
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 723
Worldwide total number of subjects	723
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	39

Adults (18-64 years)	517
From 65 to 84 years	165
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

SSA: A total of 417 participants were screened in sub-study A out of which 412 were vaccinated. SSB: A total of 311 participants were screened and vaccinated in sub-study B.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	SSA: Group 1: 12-17 years

Arm description:

Participants aged 12 to 17 years who received at least three prior doses of US-authorized mRNA COVID-19 vaccine with the most recent dose being the Omicron BA.4/BA.5 received at least 150 days prior to the study vaccination were included. Participants received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via intramuscular (IM) route on Day 1 of this study.

Arm type	Experimental
Investigational medicinal product name	BNT162b2 (Omi XBB.1.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Participants received a single dose of 30 mcg BNT162b2 (Omi XBB.1.5) administered intramuscularly.

Arm title	SSA: Group 2: 18-55 years
------------------	---------------------------

Arm description:

Participants aged 18 to 55 years who received at least three prior doses of US-authorized mRNA COVID-19 vaccine with the most recent dose being the Omicron BA.4/BA.5 received at least 150 days prior to the study vaccination were included. Participants received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Arm type	Experimental
Investigational medicinal product name	BNT162b2 (Omi XBB.1.5)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Participants received a single dose of 30 mcg BNT162b2 (Omi XBB.1.5) administered intramuscularly.

Arm title	SSA: Group 3: >55 years
------------------	-------------------------

Arm description:

Participants aged greater than (>) 55 years who received at least three prior doses of US-authorized mRNA COVID-19 vaccine with the most recent dose being the Omicron BA.4/BA.5 received at least 150 days prior to the study vaccination were included. Participants received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Evaluable immunogenicity population included all eligible assigned participants who received the study intervention to which they were assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28 to 42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Evaluable immunogenicity population included all eligible assigned participants who received the study intervention to which they were assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28 to 42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Evaluable immunogenicity population included all eligible assigned participants who received the study intervention to which they were assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28 to 42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician.

Primary: Percentage of Participants With Local Reactions Within 7 Days After Vaccination: SSA

End point title	Percentage of Participants With Local Reactions Within 7 Days After Vaccination: SSA ^{[1][2]}
-----------------	--

End point description:

Local reactions: pain at injection site, redness and swelling recorded by participants in an electronic diary (e-diary) or as adverse events (AEs) in the case report form (CRF). Redness & swelling measured & recorded in measuring device units (mdu)(range:1 to 21),1mdu=0.5 cm &were graded as mild (greater than[>] 2.0 to 5.0 cm),moderate(>5.0 to 10.0 cm),severe(>10.0 cm)&Grade 4(necrosis [swelling]&necrosis or exfoliative dermatitis[redness]).Pain at injection site graded as mild(did not interfere with activity),moderate(interfered with activity),severe(prevented daily activity)&Grade(G)4(emergency room [ER]visit or hospitalisation for severe pain at injection site).G4 LR classified by investigator or medically qualified person.Exact 2-sided confidence interval(CI)based on Clopper and Pearson method. Safety population: all participants who received study intervention.Number of Participants Analysed=Participants evaluable.

End point type	Primary
----------------	---------

End point timeframe:

Day 1 to Day 7 after vaccination

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the

baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: This endpoint was planned to be analysed only for the specified reporting arms.

No statistical analyses for this end point

Primary: Percentage of Participants With Systemic Events Within 7 Days After Vaccination: SSA

End point title	Percentage of Participants With Systemic Events Within 7 Days After Vaccination: SSA ^[3] ^[4]
-----------------	--

End point description:

Systemic events were recorded by participants in an e-diary or as AEs in the CRF. Fever: defined as oral temperature ≥ 38 degree Celsius (deg C) and categorised as ≥ 38.0 -38.4 deg C, >38.4 -38.9 deg C, >38.9 -40.0 deg C and >40.0 deg C. Fatigue, headache, chills, new or worsened muscle pain and joint pain: mild (didn't interfere with activity), moderate (some interference with activity), severe (prevented daily routine activity). Vomiting: mild: 1-2 times in 24 hours (h), moderate: >2 times in 24h, severe: required intravenous (IV) hydration. Diarrhoea: mild: 2-3 loose stools in 24h, moderate: 4-5 loose stools in 24h, severe: 6 or more loose stools in 24h. Grade 4 for all events except fever: ER visit/hospitalization. Grade 4 events were classified by investigator or medically qualified person. Exact 2-sided CI was based on Clopper and Pearson method. Safety population: All participants who received the study intervention. Number of Participants Analysed= Participants evaluable.

End point type	Primary
End point timeframe:	
Day 1 to Day 7 after vaccination	

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned for this endpoint.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was planned to be analysed only for the specified reporting arms.

End point description:

Seroresponse was defined as achieving ≥ 4 -fold rise from baseline (before the study vaccination). If the baseline measurement was below the LLOQ, the postvaccination assay result of $\geq 4 \times$ LLOQ was considered a seroresponse. Exact 2-sided CI was based on the Clopper and Pearson method. Evaluable immunogenicity population included all eligible assigned participants who received the study intervention to which they were assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28 to 42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician. Here, Number of Participants Analysed signifies number of participants evaluable for this endpoint.

End point type	Primary

End point title	Geometric Mean Ratio (GMR) of the SARS-CoV-2 XBB.1.5-Neutralizing Titers 1 Month After BNT162b2 (Omi XBB.1.5): COVID-19 Vaccine-Naïve Participants in SSB Versus Vaccine-Experienced Participants in SSA
End point description:	
GMTs and 2-sided 95% CIs were calculated by exponentiating the least square (LS) means and the corresponding CIs based on analysis of log-transformed assay results using a linear regression model with baseline assay results (log scale), age and vaccine group as covariates. Assay results below the LLOQ were set to 0.5*LLOQ. GMT is reported in descriptive section and GMR in statistical analysis section. Evaluable immunogenicity population included all eligible assigned participants who received the study intervention to which they were assigned, had at least 1 valid and determinate immunogenicity result from the blood sample collected within 28 to 42 days after the study vaccination, and had no other important protocol deviations as determined by the clinician. Here, Number of Participants Analysed signifies number of participants evaluable for this endpoint.	
End point type	Primary
End point timeframe:	
At 1 month after vaccination	

End point values	SSB: Vaccine-Naïve Substudy B	SSB Control: Vaccine-Experienced Substudy A		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	298	295		
Units: Titer				
geometric mean (confidence interval 95%)	4951.6 (4222.8 to 5806.2)	2566.5 (2186.8 to 3012.1)		

Statistical analyses

Statistical analysis title	Vaccine-Naïve SSB vs Vaccine-Experienced SSA
Statistical analysis description:	
GMRs and the corresponding 2-sided 95% CIs were calculated by exponentiating the difference in LS means (Substudy B - Substudy A) and the corresponding CIs based on analysis of log-transformed assay results using a linear regression model with baseline assay results (log scale), age and vaccine group as covariates. Noninferiority of GMR was met if the lower limit of the 95% CI was greater than 0.67.	
Comparison groups	SSB: Vaccine-Naïve Substudy B v SSB Control: Vaccine-Experienced Substudy A
Number of subjects included in analysis	593
Analysis specification	Pre-specified
Analysis type	non-inferiority
Parameter estimate	Geometric mean ratio
Point estimate	1.93
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.52
upper limit	2.44

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SSA & SSB: Systematic assessment: Local reactions, systemic events: Day 1 to Day 7 after vaccination (vacc.); Non-systematic assessment: SAEs: Day 1 of vacc. up to 6 months after study vacc. & Non-SAEs: Day 1 of vaccination up to 1 month after study vacc.

Adverse event reporting additional description:

Same event may appear as both AE and SAE but are distinct events. An event may be categorized as serious in 1 participant and non-serious in another, or a participant may have experienced both SAE and non-SAE.

Assessment type	Non-systematic

Reporting groups

Reporting group title	SSA: Group 1: 12-17 years
-----------------------	---------------------------

Reporting group description:

Participants aged 12 to 17 years who received at least three prior doses of US-authorized mRNA COVID-19 vaccine with the most recent dose being the Omicron BA.4/BA.5 received at least 150 days prior to the study vaccination were included. Participants received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Reporting group title	SSA: Group 2: 18-55 years
-----------------------	---------------------------

Reporting group description:

Participants aged 18 to 55 years who received at least three prior doses of US-authorized mRNA COVID-19 vaccine with the most recent dose being the Omicron BA.4/BA.5 received at least 150 days prior to the study vaccination were included. Participants received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Reporting group title	SSA: Group 3: >55 years
-----------------------	-------------------------

Reporting group description:

Participants aged >55 years who received at least three prior doses of US-authorized mRNA COVID-19 vaccine with the most recent dose being the Omicron BA.4/BA.5 received at least 150 days prior to the study vaccination were included. Participants received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Reporting group title	SSB: Group 1: 12-17 years
-----------------------	---------------------------

Reporting group description:

Participants aged 12-17 years who were previously exposed to SARS-CoV-2 and were COVID-19 vaccine-naïve received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Reporting group title	SSB: Group 2: 18-55 years
-----------------------	---------------------------

Reporting group description:

Participants aged 18-55 years who were previously exposed to SARS-CoV-2 and were COVID-19 vaccine-naïve received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.

Reporting group title	SSB: Group 3: >55 years
-----------------------	-------------------------

Reporting group description:

Participants aged >55 years who were previously exposed to SARS-CoV-2 and were COVID-19 vaccine-naïve received a single dose of BNT162b2 (Omi XBB.1.5) 30 mcg via IM route on Day 1 of this study.
